AWS 2022 – re:Invent re:Cap

Attendees

50,000 Onsite

300,000 Online

2300 Sessions **6** Major Venues

1. Encore
2. Wynn
3. The Venetian | Palazzo
4. Caesars Forum (venue only)
5. MGM Grand
6. Mandalay Bay

Exhibitor Floor Plan - AWS Re:Invent 2022

Table of Contents

Index Announcements Keynotes Leadership

- Analytics
- Architecture
- Artificial Intelligence & Machine Learning
- Business Applications
- Compute and Containers
- Data
- DevOps
- Front End Web & Mobile Development
- Serverless

AI / ML

- ❑ AIM202 – Automate your mortgage document processing with AWS AI/ML
- ❑ AIM203 – Boost user engagement with Amazon Personalize
- ❑ AIM204 – Automate insurance document processing with AI
- ❑ AIM207 – Make better decisions with no-code ML using SageMaker Canvas, feat. Samsung
- ✓ AIM208 – Idea to production on Amazon SageMaker, with Thomson Reuters
- ✓ AIM210 – Solve common business problems with AWS AI/ML services
- ❑ AIM214 – Learn how Black Knight is using AI to accelerate mortgage workflows
- ✓ AIM307 – JPMorganChase real-time agent assist for contact center productivity
- ❑ AIM313 – Scalable data preparation & ML using Apache Spark on Amazon SageMaker Studio
- ✓ AIM314 - Accelerate your ML journey with Amazon SageMaker low-code tools
- ❑ AIM319 – Build, manage, and scale ML development with a web-based visual interface
- ❑ AIM320 - Boost ML development productivity with managed Jupyter notebooks
- ✓ AIM321 – Productionize ML workloads using Amazon SageMaker MLOps, feat. NatWest
- ✓ AIM332 – WaFd bank delivers enhanced self-service with AWS conversational AI
- ❑ AIM333 – How Taco Bell is improving digital availability with ML forecasting
- ❑ AIM337 – Build better ML models for business decisions using Amazon SageMaker Canvas

Analytics

- ✓ ANT201 – What's new with Amazon Redshift
- ❑ ANT204 – Enabling agility with data governance on AWS
- ✓ ANT205 – Achieving your modern data architecture
- ✓ ANT207 – What's new in Amazon Streaming
- ✓ ANT208 – What's new in Amazon Athena
- ❑ ANT209 – Build interactive analytics applications
- ❑ ANT212 – How JPMC and LexisNexis modernize analytics with Amazon Redshift
- ❑ ANT220 – Using Amazon AppFlow to break down data silos for analytics and ML
- ✓ ANT223 – Simplify and accelerate data integration & ETL modernization with AWS Glue
- ❑ ANT301 – Democratizing your organization's data analytics experience
- ✓ ANT302 – What's new with Amazon EMR
- ❑ ANT317 – Self-service analytics with Amazon Redshift Serverless
- ❑ ANT324 - Modernize your data warehouse
- ❑ ANT325 – How Disney processes clickstream data on Amazon EMR Serverless
- ❑ ANT326 – How BMW, Intuit & Morningstar are transforming with AWS and Amazon Athena
- ❑ ANT335 – How Disney used AWS Glue as a data integration and ETL framework
- ✓ ANT336 – Building data mesh architectures on AWS
- ❑ ANT337 – Migrating to Amazon EMR to reduce costs and simplify operations
- ❑ ANT339 – How Samsung modernized architecture for real-time analytics
- ❑ ANT340 – How Sony Orchard accelerated innovation with Amazon MSK
- ❑ ANT341 – How Riot Games processes 20 TB of analytics data daily on AWS
- ❑ ANT342 – How Poshmark accelerates growth via real-time analytics & personalization

Data

- ✓ DAT207 – Choosing the right databases for your application
- ❑ DAT211 – How Capital One accelerates innovation with AWS databases
- ❑ DAT212 – How ADP & Twilio realize business vision with purpose-built databases
- ❑ DAT213 – How Fidelity Investments and Reltio modernized with Amazon DynamoDB
- ❑ DAT217 – Modernize apps with purpose-built databases, featuring Liberty Mutual
- ✓ DAT218 – What's new with database migrations
- ✓ DAT219 – What's new with Amazon DocumentDB
- ❑ DAT221 – Dive deep on AWS managed PostgreSQL databases
- ❑ DAT319 – S&P Dow Jones Indices' AWS journey to Amazon Aurora
- ❑ DAT320 – Deploy modern and effective data models with Amazon DynamoDB
- ❑ DAT325 – Managed Oracle Databases with Amazon RDS: New features & best practices
- ❑ DAT326 – Deep dive into Amazon Aurora and its innovations

< Table of Contents

Compute & Containers

- ✓ CMP225 – What's new in Amazon EC2
- ❑ CMP310 – Best practices for growing your business on Amazon Lightsail
- ✓ CON210 – What's new and what's next with Amazon ECS
- ❑ CON309 – Build your application easily & efficiently with serverless containers
- ❑ CON325 – Building containers for AWS
- ❑ CON326 – Are you ready? Essential strategies for Kubernetes adoption
- ❑ CON327 – Serving 4.8 billion railway customers a year: The story of Deutsche Bahn
- ✓ COM207 – Competition of the modern workloads: Serverless vs. Kubernetes on AWS
- ✓ COM301 – Unleash developer productivity with infrastructure from code
- ❑ STG303 – AWS storage for containers and serverless applications

Serverless

- ✓ SVS204 – What's new with serverless
- ❑ SVS209 – Get started building your first serverless, event-driven application
- ❑ SVS302 – Architecting secure serverless applications
- ✓ SVS303 – Building real-world serverless applications with AWS SAM
- ✓ SVS308 – AWS serverless developer experience: A day in the life of a developer
- ❑ SVS311 – Practical experience with a serverless-first strategy at Capital One
- ❑ SVS312 – Building Serverlesspresso: Creating event-driven architectures
- ❑ SVS401 – Best practices for advanced serverless developers
- ❑ SVS404 – A closer look at AWS Lambda
- ❑ TNC108 – Introduction to serverless computing and AWS Lambda

DevOps

- ✓ DOP201 – AWS infrastructure as code: A year in review
- ✓ DOP202 – Building on AWS with AWS tools, services, and SDKs
- ✓ DOP205 – Build it & run it: Streamline your DevOps capabilities with machine learning
- ✓ DOP206 – Introducing CodeCatalyst
- ❑ DOP207 – AWS Well-Architected best practices for DevOps on AWS
- ❑ DOP301 – The Amazon Builders' Library: 25 years of operational excellence at Amazon
- ❑ DOP302 – How to reuse patterns when developing infrastructure as code
- ❑ DOP314 – Governance and security with infrastructure as code
- ❑ DOP317 – Accessing AWS from your development environment

Front End Web & Mobile Development

- ✓ FWM308 – What's new for frontend web and mobile developers with AWS Amplify
- ✓ FWM309 – Design to code: Build an app frontend UI in minutes with AWS Amplify Studio
- ❑ FWM310 – Building a multi-Region serverless application with AWS AppSync
- ✓ FWM315 – Create real-time, event-driven apps with Amazon EventBridge & AWS AppSync
- ❑ FWM316 – Accelerate GraphQL API app development & collaboration with AWS AppSync

.NET on AWS

- ❑ XNT303 – Building AI-enriched applications with .NET on
- ❑ XNT304 – Purpose-built databases for modern .NET applications on AWS
- ❑ XNT402 – Cloud-native .NET applications on AWS

- ❑ FWM315 – Create real-time, event-driven apps with Amazon EventBridge & AWS AppSync
- ❑ FWM316 – Accelerate GraphQL API app development & collaboration with AWS AppSync

Application Integration

- ❑ API303 – Application integration patterns for microservices
- ❑ API307 – Designing event-driven integrations using Amazon EventBridge
- ❑ API308 – Are you integrating or building distributed applications?
- ❑ API309 – Advanced serverless workflow patterns and best practices
- ❑ API311 – Building next-gen applications with event-driven architectures
- ❑ API314 – What's possible with AWS Step functions.

< Table of Contents

Architecture

- ❑ ARC205 – Establishing your cloud foundation on AWS—beyond your landing zone
- ❑ ARC207 – Modern cloud applications: Do they lock you in?
- ❑ ARC306 – Multi-Region design patterns and best practices
- ✓ ARC311 – Build production-ready prototypes rapidly using serverless patterns
- ✓ ARC313 – Building modern data architectures on AWS
- ❑ ARC314 – Publishing real-time financial data feeds using Kafka
- ❑ ARC315 – How to understand and improve resiliency for serverless systems

- ❑ ENT213 – How to migrate, modernize, and grow using the AWS MAP
- ❑ ENT221 – Building a smarter organization powered by machine learning
- ❑ ENT311 – Migrate and modernize Oracle E-Business Suite on AWS in 5 steps
- ❑ HYB311 – How to simplify your hybrid cloud migration strategy with AWS

Build on AWS / With Purpose

- ❑ ALX201 – 10 things every voice application should do

- ❑ BSI205 – Build stunning customized dashboards with Amazon QuickSight
- ❑ BSI207 – Get clarity on your data in seconds with Amazon QuickSight Q
- ✓ BIZ213 – Serve your customers better with AWS Supply Chain

- ❑ BIZ201 – Improving multichannel communications

- ❑ BOA203 – Evolution of the machine learning development environment
- ❑ BOA309 – Build a managed analytics platform for your ecommerce business
- ❑ BOA310 – Building observable applications with OpenTelemetry

- ❑ BWP102 – The story of headless ecommerce and the future of online storefronts
- ❑ BWP201 – Build with prototypes: Be a customer-obsessed developer
- ❑ BWP302 – How Alloy synced Amazon data in real time

Enterprise & Industry

- ❑ FSI201 - Goldman Sachs: Accelerating time to value in data analytics
- ❑ FSI304 – Your blueprint to secure customer-facing applications on AWS
- ❑ PRT303 – The digital transformation journey: Santander UK
- ❑ PRT222 – Why operationalizing data mesh is critical for operating in the cloud (sponsored by Capital One)
- ❑ SAS305 – SaaS architecture patterns: From concept to implementation

< Table of Contents

Major Announcements

< Table of Contents

Analytics

Glue

Glue is a serverless, scalable data integration service used to discover, prepare, move, and integrate data from multiple sources.

- *Version 4.0*
  Updated Engines and More Formats, plus native support for the Cloud Shuffle Service Plugin for Spark and Pandas support.
  Glue for Ray
  Data engineers can use Glue for Ray to process large datasets with Python. Ray (ray.io), is a popular new open-source compute framework that helps you scale Python workloads.

OpenSearch

OpenSearch enables you to easily ingest, secure, search, aggregate, view, and analyze data for a number of use cases such as log analytics, application search, enterprise search, and more.

- *OpenSearch Serverless*
  Run large-scale search and analytics workloads without managing clusters. Pay only for the data that is ingest and the queries you run. AWS now has a complete "Serverless" offering for all of its Analytics Services.

QuickSight

- *Paginated Reports*
  Adds a missing capability (for a cost) to print/display/distribute paginated reports.
- *New & Updated APIs*
  Allows programmatic creation and management of dashboards, analysis, and templates.

Redshift

- *Integration with Apache Spark*
  Builds upon an existing open-source connector project and enhances it for performance and security, helping customers gain up to 10x faster application performance.
- *Ingestion from Kinesis and MSK Streams*
  Streaming ingestion benefits from the ability to optimize query performance with materialized views and allows the use of Amazon Redshift more efficiently for operational analytics and as the data source for real-time dashboards.

Artificial Intelligence / Machine Learning

SageMaker

Model Jumpstart

- Share ML Models and Notebooks More Easily Within Your Organization
  An API for programmatically analyzing and classifying the documents contained in mortgage loan application packages and extracting the data they contain.

Studio

- Built-in integration with Amazon EMR
  Starting today, you can now monitor and debug your Apache Spark jobs running on EMR right from SageMaker Studio notebooks with just a click.

Textract

- *Analyze Lending API*
  An API for programmatically analyzing and classifying the documents contained in mortgage loan application packages, and extracting the data they contain

Transcribe

- *Real-Time Analytics During Live Calls*
  Provides APIs for developers to accurately transcribe live calls and at the same time identify customer experience issues and sentiment in real time. Sessions: AIM307

Developer Productivity

App Composer

App Composer

Helps developers simplify and accelerate architecting, configuring, and building serverless applications. You can drag, drop, and connect AWS services into an application architecture.

CodeCatalyst

CodeCatalyst

A unified software development service that makes it faster to build and deliver software on AWS. Provides an integrated project experience that brings together the tools needed to plan, code, build, test, and deploy applications on AWS.

CodeWhisperer

- *Support for new languages, administrative controls, and simple signup*
  Support for C# and TypeScript projects. Allows administrators the ability to enable CodeWhisperer for their organization with Single Sign-On authentication.

Compute

EC2

- ENA (Elastic Network Adapter) Express
  Reduces latency of traffic flows while also increasing maximum bandwidth. You get a lot more per-flow bandwidth and a lot less variability with just a checkbox.
- *New Instance Types for Standard, Network, HPC, and Deep Learning Workloads*
  More compute server types for faster and specialized workloads. AWS specializes in raw compute instances.

ECS

- Service Connect
  Add a layer of resilience to your ECS service communication and get traffic insights with no changes to your application code.Provides an easy network setup and seamless service communication deployed across multiple ECS clusters and virtual private clouds (VPCs).

Lambda

- Lambda SnapStart
  When enabled, makes Java-based Lambda Functions start up to 10x faster, at no extra cost.
- Lambda Function Inspector
  Identifies software vulnerabilities in application package dependencies used in the Lambda function code.

Security

Security Lake

New Service. Automatically centralizes your organization's security data from cloud and on-premises sources into a purpose-built data lake stored in your account.

Data

Clean Rooms

Clean Rooms

Clean Rooms (preview coming in a few weeks) is a new service that makes it easier for customers and their partners to analyze and collaborate on their collective datasets to gain insights without revealing underlying data to one another.

Data Zone

Data Zone

Share, search, and discover data at scale across organizational boundaries. Collaborate on data projects through a unified data analytics portal that gives you a personalized view of all your data while enforcing your governance and compliance policies.

Business Applications

Connect

- Step by Step Guides, Demand Forecasting
  Create workflows that walk agents through custom UI pages that suggest what to do at a given moment during a customer interaction. Analyze and predict contact volume based on historical data.

Supply Chain

New Service - Supply Chain unifies data, provides ML-powered actionable insights, and offers built-in contextual collaboration. Can connect to your existing enterprise resource planning (ERP) and supply chain management systems, without requiring replatforming, upfront licensing fees, or long-term commitments.

Wickr

New Service (via Acquisition) Enterprise communications service with end-to-end encryption, that allows businesses and public sector organizations to communicate more securely, enabling customers to meet auditing and regulatory requirements like e-discovery, legal hold, and FOIA requests.

Keynotes

- KEY001 – Peter DeSantis
- KEY002 – Adam Selipsky
- KEY003 – Swami Sivasubramanian
- KEY004 – Dr. Werner Vogels

< Table of Contents

KEY001

Keynote with Peter DeSantis

Speakers

- Peter DeSantis, Senior Vice President, AWS Utility Computing

Announcements

- New – Compute Instances
- New – ENA Express
- New – Lambda SnapStart

Takeaways

- AWS is engineering its datacenter compute infrastructure to perform at lower latency and higher throughput. This could give AWS a competitive advantage in the Cost/Compute model over other clouds.

Azure

- Currently, I don't believe MS makes it's own silicon.

Compute Announcements

- New – Graviton 3E & Nitro v5 Chips
  - AWS continues to iterate on its Nitro and Graviton chips and controller software. This benefits High Performance Computing (HPC) workloads such as Weather Forecasting, Life Sciences, and Industrial engineering
- New - EC2 Instance Types C7gn, Hpc7g, R7iz
  - AWS continues to iterate on its Nitro and Graviton chips and controller software. This benefits High Performance Computing (HPC) workloads such as Weather Forecasting, Life Sciences, and Industrial engineering
- New – Scalable Reliable Datagram (SRD) Protocol
  - AWS implemented a new networking protocol (SRD) that replaces the standard Transmission Control Protocol (TCP). AWS can do this internally, because they have chosen to implement a lot of their own Silicon & Firmware
  - As an underlying technology, Amazon is implementing SRD in ti's core infrastructure products.
- New - ENA Express (Elastic Network Adapter)
  - Customers can enable ENA Express today, to take advantage of more throughput with less variability in latency. Increases maximum single-flow bandwidth from 5 Gbps to 25 Gbps
- Takeaway - Amazon is making fundamental changes to its datacenter and infrastructure components that will improve performance across its product line.

Serverless

- New – Lambda SnapStart
  - Enabling Lambda SnapStart for Java functions can make them start up to 10x faster, at no extra cost.
  - Building upon their lightweight virtualization technology, Firecracker, Amazon has solved the Cold Start problem for Java based applications. Cold Starts are a common problem in serverless based function technology. It is expected that more runtimes beyond Java may be supported.

< Section Header
< Table of Contents

KEY003

Keynote with Swami Sivasubramanian

Announcement 1 – Athena for Apache Spark

Run Apache Spark (serverless) workloads, using Jupyter Notebook as the interface to perform data processing on Athena, and programmatically interact with Spark applications using Athena APIs. Athena allows you to turn your S3 storage buckets into SQL queryable data. This announcement allows you to run Spark against your Athena data sources

Takeaway - A cool enhancement. When Athena was introduced, it was a way to easily query raw data in your S3 storage. IMO this is backing into a data lake / spark architecture. The right way to approach it would be to pool to a data lake, and then use Spark. However, if you just want to get stuff done, the Athena / Spark is a quick route there. Azure doesn't have a comparable service to Athena, instead opting for the Data Lake route.

Announcement 2 – DocumentDB Elastic Clusters

Elastic Clusters enables you to elastically scale your document database to handle virtually any number of writes and reads, with petabytes of storage capacity.

Takeaway –Adds a key missing capability to DocumentDB (especially as a serverless prod. Azure's documented oriented database CosmosDB has had auto scaling feature for awhile.

Announcement 3 - SageMaker now supports GeoSpatial ML

SageMaker's new geospatial capabilities simplify the process of building, training, and deploying models with geospatial data. You can now access readily available geospatial data sources, efficiently process or enrich large-scale geospatial datasets with purpose-built operations and accelerate model building by selecting pretrained ML models. You can then analyze and explore the generated predictions on an interactive map within SageMaker and share and collaborate on results.

Takeaway - A feature update that will excite you if you use a lot of Geospatial data. I spoke with a few people yesterday about this, I didn't find too much excitement about this feature, except from a NASA engineer who uses Geospatial information in his daily work. No Azure Service or features that I'm aware of for this. I did find this old announcement regarding Geospatial data on Azure.

Announcement 4 - Redshift Multi-AZ

Allows you to recover in case of Availability Zone failures without any user intervention. A Redshift Multi-AZ deployment is accessed as a single data warehouse with one endpoint and helps you maximize your data warehouse performance by distributing workload processing across multiple AZs automatically. You are not required to make any application changes to maintain business continuity during unforeseen outages.

Takeaway - A feature update that will bring better availability to operationally critical data warehouses. Amazon Availability Zones are pretty robust so the failure of one is a fairly low event, but for those customers that require this level of business continuity, the price (unknown at this time) may be worth it. This also appears to be fairly easy to implement. Azure does not have a "one-click" implement Multi-Region availability, but this could be engineered, but with a lot of complexity.

< Section Header
< Table of Contents

Announcement 5 – Trusted Extensions for PostgreSQL

Trusted Language Extensions for PostgreSQL provides database administrators control over who can install extensions and a permissions model for running them, letting application developers deliver new functionality as soon as they determine an extension meets their needs.

Takeaway - Unsure, it looks to remove friction/block of adding customer extensions to Amazon's PostgreSQL RDS solution. Since this an open-source project, it's also possible that 3rd party managed service providers like Azure Database for PostgreSQL would also benefit.

Announcement 6 – GuardDuty RDS Protection

Once enabled, GuardDuty RDS Protection begins analyzing and profiling access to Aurora databases, and when suspicious behaviors or attempts by known malicious actors are identified, GuardDuty issues actionable security findings to the GuardDuty console

Takeaway – Extends GuardDuty's footprint to Aurora databases. Azure Sentinel is the best comparison to GuardDuty.

Announcement 7 – Glue Data Quality

A new capability that automatically measures and monitors data lake and data pipeline quality. Glue Data Quality automatically analyzes your data to gather data statistics. It then recommends data quality rules to get started. You can update recommended rules or add new rules using provided data quality rules. If data quality deteriorates, you can then configure actions to alert users.

Takeaway - Pretty excited about this. Ensuring data quality in pipelines has always been painful because it's necessary but repetitive. Glue Data quality appears to replace that burden with some machine learning models to do this for you. Azure Data Factory (Glue's Azure counterpart) does have the ability to add data quality transforms/filters but are not ML driven.

Announcement 8 – Centralized Access Controls for Redshift Data Sharing

Centrally manage permissions on data being shared across your organization. You can view, modify, and audit permissions on the tables and views in the Redshift datashares.

Takeaway - You now have better visibility and control of data shared within and across accounts in your organization. This is particularly helpful in cases where people "accrue" rights/permissions as they move around different departments within an organization. Auditing helps ensure they only have access to data they should have in their new role. Unsure of Azure Synapse Analytics capabilities here, but it does use a Role/User model in Active Directory to control access.

< Section Header
< Table of Contents

Announcement 9 – SageMaker ML Governance

New purpose-built tools for Amazon SageMaker to improve governance of machine learning (ML) projects.

- Role Manager simplifies the permission setting for ML activities
- Model Cards create a single source of truth for model information by centralizing and standardizing documentation throughout the model lifecycle.
- Model Dashboard gives you unified monitoring across all your models by providing deviations from expected behavior, automated alerts, and troubleshooting to improve model performance.

Takeaway – Added features to improve governance of ML information. Of these, the Model Dashboard is probably the most significant because it allows you to report on model performance, something that used to require manual work or 3rd party tools. Azure Machine Learning does not have a Model Dashboard capability

Announcement 10 – Redshift Auto-Copy from S3

You can set up continuous file ingestion rules to track your Amazon S3 paths and automatically load new files without the need for additional tools or custom solutions. Aligned with the zero-ETL marketing this allows you to easily ingest files into Redshift.

Takeaway – Part of the zero-ETL vision, but again (no T transformation capability). I also think this is similar to Athena's ability to Query data residing in S3. The advantage this has over Athena is that you can bring this directly into your Redshift instance (and run Spark workloads against it). Amazon is giving you lots of different ways to do the same thing. Azure does not have this capability, although you could conceivably setup a Data Factory pipeline to ingest into Azure Synapse.

Announcement 11 – Redshift Auto-Copy from S3

AppFlow is a fully managed integration service that enables you to transfer and transform data between software as a service (SaaS) applications such as Salesforce, SAP, Google Analytics, Facebook Ads, and ServiceNow, and AWS services like Simple Storage Service (S3) and Redshift.

- Marketing connectors (e.g., Facebook Ads, Google Ads, Instagram Ads, LinkedIn Ads).
- Connectors for customer service and engagement (e.g., MailChimp, Sendgrid, Zendesk Sell or Chat, and more).
- Business operations (Stripe, QuickBooks Online, and GitHub).

Takeaway – More integration goodness, Marketers will appreciate the Ads connectors as well as service and engagement connectors. I am unaware of any Azure based service similar to AppFlow,

< Section Header
< Table of Contents

KEY004

Keynote with Dr. Werner Vogels

Preamble

As the CTO for Amazon, you can always expect a great software engineering keynote from Werner. The major theme is, the world is asynchronous, so why aren't our systems. A little vignette opens with Werner choosing to step into "The Matrix" in a synchronous world. Synchronous processing involves a lot of waiting, you can bet that the upcoming announcements will be focused on developing more asynchronous systems.

Announcement 1 – Step Functions Distributed Map

Step Functions is a visual workflow service capable of orchestrating actions of AWS services to automate business processes and data processing workloads. With Distributed Map, Step Functions can iterate over objects such as images or logs stored in S3, then launch and coordinate thousands of parallel workflows to process the data and save the results of executions to S3.

Takeaway – This appears to be a major announcement, like data processing with MapReduce pioneered by Google, step functions will break down larger problems into smaller problems, parallelizing them for faster processing. Instead of data processing, this can be used to trigger other AWS services including custom Lambda functions. The Visual Workflow and monitoring aspects of Step Functions should make it easier to monitor and build large, distributed processing flows. Azure has Logic Apps, which is also a visual workflow service, but it is mainly used for Enterprise Integration Workflows, and lacks the capabilities of Distributed Map.

Announcement 2 – Application Composer

Application Composer helps developers simplify and accelerate architecting, configuring, and building serverless applications. You can drag, drop, and connect AWS services into an application architecture.

Takeaway – Developers hate documentation, and sometimes starting a new project from scratch can be a bit daunting. With Application Composer you can import, modify and create CloudFormation Templates (Similar to Azure ARM Templates) and get a visual view of your system. There are a few options to do this with Azure.

- A Visualizer Built into its Portal
- ArmViz - An Open-Source Project
- A Visual Code Add In Arm Template Viewer

Announcement 3 – EventBridge Pipes

Integration (or "glue") code is usually needed to connect and bridge communication between services. Writing glue code slows developer velocity, increases the risk of bugs, and more time spent writing undifferentiated code than building better experiences. Event Bridge Pipes provides a seamless visual means of integrating supported AWS and self-managed services, favoring configuration over code. A customer (TrustPilot) came on stage to show the number of pub/sub integrations a typical process flow has, and how Pipes helps increase productivity and customer experience.

Takeaway - If you are using Event Bridge today, this visual designer will reduce the amount of code you need to perform integrations. Azure has multiple Event Processing Engines (Service Bus, Event Grid, and Event Hubs), as far as I know MS does not provide a tool like Event Bridge Pipes.

< Section Header
< Table of Contents

Announcement 4 – CodeCatalyst

A unified software development and delivery service that enables software development teams to quickly and easily plan, develop, collaborate on, build, and deliver applications on AWS. Here are its major features.

- Blueprints that set up the project's resources—not just scaffolding for new projects, but also the resources needed to support software delivery and deployment.
- On-demand cloud-based Dev Environments, to make it easy to replicate consistent development environments for you or your teams.
- Issue management, enabling tracing of changes across commits, pull requests, and deployments.
- Automated build and release (CI/CD) pipelines using flexible, managed build infrastructure.
- Dashboards to surface a feed of project activities such as commits, pull requests, and test reporting.
- The ability to invite others to collaborate on a project with just an email.
- Unified search, making it easy to find what you're looking for across users, issues, code and other project resources.

Takeaway – This appears to take on GitHub or Azure DevOps (Although DevOps is being eaten by GitHub). It does everything those tools do. Interesting enough, in talking to other attendees, they wonder if this will replace another AWS product CodeStar, which seems to be not quite as feature rich, but does a lot of the same things. Asked Amazon folks, they didn't have an answer. 😮

Are we in a simulation?

From a product announcement that was it. The rest of Werner's keynote highlighted the need for simulation to innovate, and how companies like Epic are using AWS and Unreal Engine to build simulated worlds. He also talked a bit more about SimSpace Weaver, announced in Adam's Keynote.

Lastly, Werner posted a new entry to his Blog - Tech predictions for 2023 and beyond | All Things Distributed, that seem to play off of announcements made at re:Invent.

- Prediction 1: Cloud technologies will redefine sports as we know them
- Prediction 2: Simulated worlds will reinvent the way we experiment
- Prediction 3: A surge of innovation in smart energy
- Prediction 4: The upcoming supply chain transformation
- Prediction 5: Custom silicon goes mainstream

< Section Header
< Table of Contents

Announcement 8 – Connect - 3 New Capabilities

- Create step-by-step guides for your agents
- ML Driven forecasting, capacity planning, and scheduling
- Contact Lens Enhancements

Takeaway - New features added. In the future AWS should break these BizApps out to a separate conference, especially as they continue to grow their portfolio (see SupplyChain announcement)

Announcement 9 – Clean Rooms

Helps customers and their partners to more easily and securely match, analyze, and collaborate on their combined datasets–without sharing or revealing underlying data.

Takeaway – Allows data sharing while protecting data. Excited about this!
In the past, it was a challenge to setup data pipelines and integrations just to share data.
I always argued that we could spend that time getting more of our data centralized to a data lake, then share that data through controls. Clean Rooms solves this problem. Azure has this capability, but (Azure Data Sharing, I believe, but doesn't look as robust as this)

Announcement 10 – Supply Chain

Supply Chain can connect to your existing enterprise resource planning (ERP) and supply chain management systems, without requiring replatforming, upfront licensing fees, or long-term commitments.

Takeaway - AWS moving further into Business Apps. Is this an opening shot to established ERP vendors? Not an area I am very familiar with. Is AWS going after the Oracle and SAPs of the world? Again, not fitting the profile of the majority of attendees, but a whole new area.

Announcement 11 – Omics

Helps healthcare and life science organizations store, query, and analyze genomic, transcriptomic, and other omics data and then generate insights from that data to improve health and advance scientific discoveries.

Takeaway – If you are in the Life Sciences or Healthcare industry, you may be excited. I am not.

Leadership Sessions

- ENT234 – Executive insights panel: Changing your culture in the age of cloud, Francessca Vasquez, Vice President, Technology and Customer Solutions
- STG221 –AWS storage innovations at exabyte scale, Mai-Lan Tomsen Bukovec Brat, Vice President, AWS Foundational Data Services
- AIM217 – Innovate with AI/ML to transform your business, Bratin Saha, Vice President, Machine Learning and AI
- ANT203 – Unlock the value of your data with AWS analytics, G2 Krishnamoorthy, Vice President, AWS Analytics
- COP224 – Cloud Operations with Nandini Ramani, Vice President, AWS Monitoring & Observability and Kurt Kufeld, Vice President, AWS Platform
- CMP223 – Compute innovation to enable any application in the cloud, David Brown, Vice President, Amazon EC2
- DOP208 – Delighting developers: Builder experience at AWS, Adam Seligman, Vice President, Developer Experience
- HYB201 – AWS wherever you need it, Wayne Duso, Vice President, Storage, Edge, and Data Protection, Jan Hofmeyr, Vice President, Amazon EC2 Edge
- CON208 – Kubernetes virtually anywhere, for everyone, Barry Cooks, Vice President, Kubernetes at AWS
- SVS210 – Accelerating innovation with serverless on AWS, Holly Mesrobian, Vice President, Serverless Compute

< Table of Contents

ENT234

Executive insights panel: Changing your culture in the age of cloud

Speakers

- Francessca Vasquez, Vice President, Technology and Customer Solutions

Takeaways

❖ Getting culture right is key to innovating in the cloud.

Intro

- Being an Innovative Company means you have to overcome some challenges around Culture, Organization, Skills, Risk.

Panel Discussion on Culture

- Panel Members
  - Sean Scott, Chief Product and Development Officer, PagerDuty
  - Candace Tang, Vice President Developer Experience Platform, Expedia
  - Justan Gehtland, Vice President Engineering, Nubank
- Topics
  - Watch - How do you think about "Culture eating Strategy"
  - Watch – Tell me about the role developers play in shaping culture.
  - Watch – How do you think about Talent?
  - Watch – What role do automation processes play in shaping Culture?
  - Watch – Discuss Candace's quote, "Companies are that their best when every member of our team feels respected, included, and heard".
  - Watch – How do you set goals and metrics around changing culture?
  - Watch – What is NuCloud and how has it helped shape Nubanks culture?
  - Watch – How should teams think about transforming to operating at scale?

AWS storage innovations at exabyte scale

Speakers

- Mai-Lan Tomsen Bukovec, VP of AWS Foundational Data Services
- Andy Warfield, AWS Distinguished Engineer

Relevant Announcements

- See Notes

Takeaways

- When Amazon improves, you benefit with 0 to minimal effort

Three Themes

- Design for Agility (Choice, Simplify, Partner)
- Dynamically Manage Growth
- Plan for the Unexpected

Products

- New – Doubled performance on FSX.
- New – Elastic Throughput and lower latency on EFS
- Cloud based filer to make on-prem storage appear in cloud
- New – Increased throughput for Glacier
- New – S3 Access Point Cross Account Capability
- New – Redshift Streaming Ingestion

Data Lake

- Watch – AWS AI services to address 3 main use cases.

Cost Optimization

- Watch – Cost Optimization, through Intelligent Tiering
  - New – Data Zone
  - New – MSK Tiered Storage

Plan for the Unexpected

- Watch – Planning for the Unexpected
  - New – Security Lake
  - New – S3 Multi-Region Access Points Failover
  - New – Pattern Matching for SNS and CloudWatch
  - New – Rule Lock for Recycle Bin Protection
  - New – Backup for expanded resources
  - New – Compliance capabilities for Backup

Introducing Elastic Throughput on Amazon EFS

Eliminate performance planning and only pay for what you use

NEW Nov. 27

What it's for
Spiky, unpredictable, throughput-constrained workloads

When to use
If you don't know what you need – for spiky workloads (average-to-peak throughput of <5%) and for new/changing workloads

NEW Nov. 27

Lowering latencies on Amazon EFS by up to 60% with read latency as low as 250 microseconds

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Cloud bursting to accelerate workloads with Amazon File Cache

GA Sept. 29

"**Ten-fold growth** in lab imaging is driving the need for more on-premises integration – we look forward to using **Amazon File Cache** to bring the compute to our data wherever it resides."

Cajal Neuroscience

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 15

AVAILABLE NOW

Amazon S3 Glacier up to 10x restore throughput increase

UP TO 90% FASTER RETRIEVALS FROM S3 GLACIER FLEXIBLE RETRIEVAL, S3 GLACIER DEEP ARCHIVE

Automatically apply to S3 Glacier Flexible Retrieval and S3 Glacier Deep Archive at no additional costs

Ideal for restoring backups, responding to audit requests, retraining machine learning models, and performing analytics on historical data

Significantly reduce restore completion time for datasets composed of small objects

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved. aws

NEW Nov. 30

Amazon S3 now supports cross-account access points

SIMPLIFY DATA ACCESS FOR ANY AWS SERVICE OR APPLICATION THAT STORES DATA IN S3

Amazon S3 Access Points can now be used to securely delegate access permissions for shared datasets to other AWS accounts

Bucket owners are able to authorize access via access points created in other accounts

Bucket owners can delegate specific IAM-based access control decisions to the access point owner from other AWS accounts

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved. aws

NEW Nov. 29

AVAILABLE NOW

Amazon Redshift Streaming ingestion support

INGEST STREAMING DATA INTO YOUR DATA WAREHOUSE FOR REAL-TIME ANALYTICS

Directly ingest streaming data into your data warehouse from Amazon Kinesis Data Streams and Amazon MSK

Perform rich analytics using familiar SQL, and easily create and manage ELT pipelines

Process large volumes of streaming data from multiple sources to derive insights in seconds

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved. aws

Agility in decision-making

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved. aws

Best practices for cost optimization

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 29

COMING SOON

Amazon DataZone

CATALOG, DISCOVER, SHARE, AND GOVERN DATA ACROSS THE ORGANIZATION

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

GA Oct. 28

AVAILABLE NOW

Amazon MSK tiered storage

A LOW-COST STORAGE TIER THAT SCALES TO VIRTUALLY UNLIMITED STORAGE

Increase your topics' storage without needing to increase the number of brokers

Scale your compute and storage independently

Save with a low-cost storage tier

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 29

PREVIEW

Amazon Security Lake

AUTOMATICALLY CENTRALIZE SECURITY DATA INTO A PURPOSE-BUILT DATA LAKE IN A FEW CLICKS

Centralize data automatically from cloud, on-premises, and custom security sources across Regions

Optimize and manage security data for more efficient storage and query performance

Normalize data to an industry standard to easily share and use with multiple analytics tools

Analyze using your preferred analytics tools while retaining control and ownership of your security data

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 28

AVAILABLE NOW

Amazon S3 Multi-Region Access Points failover controls

SUPPORT AN ACTIVE-PASSIVE CONFIGURATION AND CUSTOMER-INITIATED FAILOVER

Perform disaster recovery and application failover testing in an active-passive configuration

Build high availability to maximize uptime for business-critical applications

Automatically replicate S3 objects across AWS Regions you define to maintain copies of your data

Shift S3 data access requests to another AWS Region within minutes

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Leverage pattern matching and machine learning (ML) to protect data

Amazon SNS message data protection

Facilitate real-time data protection in applications that use Amazon SNS to exchange high volumes of data

Discover and protect PII and PHI to support compliance objectives, such as GDPR, HIPAA, PCI-DSS, and FedRAMP

NEW Nov. 3

Amazon CloudWatch Logs data protection

Enable Amazon CloudWatch Logs data protection to detect and mask sensitive log data

Detect and protect sensitive log data in transit

NEW Nov. 27

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 23

AVAILABLE NOW

Amazon EBS Rule Lock for Recycle Bin

PROTECT EBS VOLUMES FROM ACCIDENTAL OR UNINTENDED DELETION

Lock retention rules to prevent them from being modified or deleted

Protect Amazon EBS snapshots and EC2 AMIs from unintended deletions and account access

Inadvertent deleted resources are safely retained in the Recycle Bin and can be recovered later

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Backup expands support of resources

Both on premises and cloud data

Modern apps

Application-aware support for AWS CloudFormation and infrastructure as code — NEW Nov. 27

Modern analytics

Amazon Redshift — NEW Nov. 27

Preview of SAP HANA on Amazon EC2 — NEW Nov. 21

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW Nov. 27

AVAILABLE NOW

New compliance capabilities on AWS Backup

AUDIT AND REPORT WITH INSIGHTS ON COMPLIANCE STATUS OF DATA PROTECTION FRAMEWORKS

Cross-Region, cross-account support for organization-wide visibility and management

Legal holds prevent deletion of backups for e-Discovery use cases

Cohasset certifies Vault Lock for Sec-17a, FINRA 4511(c), and CFTC 1.31(c)

Unlock the value of your data with AWS analytics

Speakers

- G2 Krishnamoorthy, Vice President, AWS Analytics

Relevant Announcements

- See Notes

Takeaways

- AWS has everything you need to build a Modern Data Architecture
- They are integrating more of their services to make it easy for data integration and insights

Setup

- What does it meant to be a Data Driven Organization
  - Data Is an Organizational Asset
  - Data is accessible and secure
  - Data is put to work
- Octank as a typical organization that is Data challenged
  - AWS is here to help, meet you where you are in your journey
- Data Integration - ETL
  - You need ETL, AWS has built Glue to help everyone put their data to work.
  - New – Glue for Ray, a new engine option for data integration at scale
  - New – Redshift streaming ingestion
  - New – Aurora zero-ETL for Redshift
  - New – 20 new Connectors for AppFlow
  - Federated query allows you to bring data together
- Data Warehouse / Lakes
  - Redshift is your data warehouse foundation
  - New – Redshift integration for Apache Spark
  - Broad support for transactional data lakes
  - Simplify permissions and access across
  - New – Data Zone for data discovery, and access
  - Watch – FINRA talk about their data integration journey
- Analytics
  - Broad set of tools
  - New – Athena for Apache Spark
  - New – OpenSearch Serverless
  - Watch – AirBnb use OpenSearch and Real-Time streams
- Analytics
  - Integrated experience with SageMaker
  - New – Paginated Reports in QuickSight
  - New – QuickSight API to create, update dashboards

COP224

Transform with AWS Cloud Operations: From vision to reality

Speakers

- Nandini Ramani, VP of Monitoring at AWS
- Kurt Kufeld, VP of AWS Platform

Relevant Announcements

❖ See Notes

Takeaways

❖ New tools to help you setup and maintain a controlled environment with enhancements to help simplify your operations

Cloud Operations Model

- Setup, Build & Migrate, Operate

Create the Right Environment

- Use Control Tower to help build the right environment
  - New – Comprehensive Controls Management in Control Tower
- Use Config to Assess, Audit, and Configure Services
  - New – Proactive Compliance for Config.
  - New – CloudTrail Lake now integrates with Config

Simplify Operations

- Integrated Application Experience in Systems Manager
  - Setup applications, improve resilience, access secrets
- Find resources more easily with Resource Explorer
- Watch – How dish Wireless is simplifying operations

Deliver the Experience

- Visibility into your system is important
- Cloudwatch
  - New – Cloudwatch Internet Monitor to diagnose and understand network issues
  - New – Cross Account Visibility
  - New – Data protection of Logs
  - Updated Prometheus Alerting and Grafana support for VPC

< Section Header
< Table of Contents

Make it a good day with AWS Cloud Ops

Set up	Build and migrate	Operate

Throughout each phase, AWS enables you to optimize costs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW IN PREVIEW

AWS Control Tower

Comprehensive controls management in AWS Control Tower

Reduce risk and set up governance quickly and easily in multi-account AWS environments

- See your controls in one place
- Start using services quickly
- Organize controls by service, control objective, and compliance framework
- Quickly define and manage controls

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW LAUNCH

AWS Config

AWS Config now supports proactive compliance

Proactively check resource compliance before provisioning

- Cost and time optimization
- Flexibility
- Customization to choose provisioning system

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW LAUNCH

AWS CloudTrail

Simplify security and compliance investigations with AWS CloudTrail Lake

CloudTrail Lake now integrates with AWS Config

- Immutable store with built-in query engine and out-of-the-box sample queries
- Correlate activity logs with resource configuration and compliance history
- Search and analyze audit evidence through integration with AWS Audit Manager

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Simplify operations by focusing on applications

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

Integrated application experience

Define and manage applications easily

- Set up application monitoring quickly
- Improve application resilience
- Access secrets and variables with lower latency
- Get details of resource change requests

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

Search for and discover resources across AWS

Find and act on the right resources with AWS Resource Explorer

- Discover all your resources with a single step
- Go to resource details in a single step
- Accessible in console or SDK/CLI
- Support resources at scale

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW IN PREVIEW

Amazon CloudWatch Internet Monitor

Amazon CloudWatch

Diagnose and understand network issues

- Diagnose within minutes
- Identify cause of the internet performance issue
- Understand user impact

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW LAUNCH

Cross-account observability in Amazon CloudWatch

Amazon CloudWatch

Monitor and troubleshoot apps across multiple accounts

- Cross-account telemetry
- Troubleshoot across multiple accounts
- Centralized view

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW LAUNCH

Data protection of logs in Amazon CloudWatch

Amazon CloudWatch

Automatically and accurately identify and mask sensitive information in logs

- Pattern matching and machine learning
- No custom solutions needed
- Reduce risks

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

VPC support and Prometheus alerting in Amazon Managed Grafana

Connect and view all of your data sources and Prometheus alerts in one place

- Securely connect Grafana to all of your public and private data sources in VPCs
- A single-pane-of-glass view
- Visualize Prometheus alerts in one place

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

CMP223

Compute innovation to enable any application in the cloud

Speakers

- Dave Brown, VP of Amazon EC2

Relevant Announcements

- See Notes

Takeaways

- AWS Key Differentiator is in their Compute, from their own Silicon, to there relentless pursuit of higher performance at lower cost

Scale & Performance

- Pioneered offloading system controller software on to silicon
  - Nitro System / Card / Chip / Hypervisor
  - Helps w/price performance vs other clouds
- New – Intel Compute Instances
- New – Torn Write Protection increases database performance
- Run isolated workloads with Nitro Enclaves
  - New – Nitro Enclave support for Graviton and Kubernetes

Operational Excellence

- Continuous improvement on EC2

Compute for Every Workload

- Broadest and deepest platform choice
  - New – Graviton 3 instances
  - Moving to Graviton can reduce costs
- New Instances for High Performance Computing Use Cases
- New Instances for Machine Learning Workloads

Cost Optimization and Best Practices

- Make It Cultural
- Tools & Services
- Accountability
  - Moving to Graviton can reduce costs

Compute Where You Need It

- Local Zones, New Regions, and Outputs for On-Premises computing

< Section Header
< Table of Contents

COMPUTE INNOVATION FOR EVERY WORKLOAD

- World class scale and performance
- Operational excellence
- Compute for every workload
- Cost optimization and best practices
- Compute where you need it

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Innovation enabled by AWS Nitro System

MODULAR BUILDING BLOCKS FOR RAPID DESIGN AND DELIVERY OF EC2 INSTANCES

NITRO CARD

Local NVMe storage,
Amazon EBS, networking,
monitoring, and security

NITRO SECURITY CHIP

Integrated into motherboard
Protects hardware resources

NITRO HYPERVISOR

Lightweight hypervisor
Memory and CPU allocation
Bare metal-like performance

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Nitro performance for real-world workloads

AMAZON EC2 INSTANCES CAN DELIVER OVER 15% HIGHER THROUGHPUT PERFORMANCE

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

6th Gen EC2 Network-optimized instances

BEST PERFORMANCE IN THE CLOUD FOR HIGH-NETWORKING AND EBS WORKLOADS

UP TO 200 GBPS

First network-optimized instance in the cloud to support 200 Gbps to accelerate data-intensive analytics workloads

UP TO 2X PPS

Scale performance of network virtual appliances, Telco, and in-memory database workloads

EBS OPTIMIZED

Supports up to 80 Gbps of Amazon EBS bandwidth to enable high performance file systems, databases, and big data analytics

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Nitro SSD

HIGH-PERFORMANCE, LOW-LATENCY SSD CUSTOM DESIGNED BY AWS

LOWER LATENCIES

Tightly integrated with the AWS Nitro System to provide 60% lower I/O latency

IMPROVED RELIABILITY

Faster firmware updates to improve reliability without any downtime to the instance

NITRO SECURITY

All data stored on the disks is encrypted at rest with AES-256 ephemeral keys

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

Announcing Torn Write Prevention

IMPROVE DATABASE PERFORMANCE WITH AMAZON EC2 I4I INSTANCES AND AMAZON EBS

AWS NITRO SSDs

Support for Amazon EC2 I4i storage optimized instances and EBS volumes for all Nitro-based instances

DATABASE PERFORMANCE

Up to 30% higher database Transactions Per Second (TPS)

REDUCE COSTS

Improved database performance eliminates the need to over-provision or scale-up the cluster to meet business growth, reducing TCO

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Nitro Enclaves

CREATE ISOLATED COMPUTE ENVIRONMENTS TO FURTHER PROTECT AND PROCESS HIGHLY SENSITIVE DATA

FULLY ISOLATED

Enclaves are hardened and constrained environments that can only be accessed through secure local channels

SECURE

Attestation is integrated with AWS Key Management Service to ensure sensitive data is only accessed by the Nitro Enclave

USE CASES

Further protect and process highly sensitive data, such as personally identifiable information (PII), healthcare, and financial data

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

AWS Nitro Enclaves Enhancements

CREATE ISOLATED COMPUTE ENVIRONMENTS TO FURTHER PROTECT AND PROCESS HIGHLY SENSITIVE DATA

GRAVITON

Nitro Enclaves is now supported across the majority of Graviton, Intel, and AMD-based Amazon EC2 instances

KUBERNETES

Use Kubernetes tools to orchestrate, scale, and deploy enclaves from a Kubernetes pod

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon EC2 Launch times

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

- Choice of processor (AWS, Intel, AMD, Apple)
- Fast processors (up to 4.5 GHz)
- High memory footprint (up to 24 TiB)
- Instance storage (HDD and NVMe)
- Accelerated computing (GPUs, ASICs, Video, FPGA)
- Networking (up to 1,600 Gbps)
- Bare metal
- Size (Nano to 112xlarge)

OPTIONS

- Amazon EBS
- Amazon Elastic Inference

MORE THAN **600** INSTANCE TYPES

for virtually every workload and business need

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Innovating with AWS Graviton3

PROVIDES A 25% PERFORMANCE IMPROVEMENT OVER GRAVITON2

IMPROVED PERFORMANCE

Up to 25% higher compute performance and 2x higher floating-point to accelerate compute-intensive workloads

FASTER MEMORY

Supports DDR5 memory to provide 50% more memory bandwidth over DDR4 memory

ENERGY EFFICIENT

Consumes 60% less power for the same performance compared to other CPUs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

PREVIEW

Amazon EC2 C7gn instances

HIGHEST NETWORK BANDWIDTH FOR EC2 NETWORK-OPTIMIZED INSTANCES

HIGHEST NETWORK PERFORMANCE

Scale data intensive workloads workloads with 200 Gbps of bandwidth and 2x higher throughput per vCPU compared to current C6gn instances

HIGHEST PPS PERFORMANCE

The new Nitro v5 card enables the highest packet processing performance across network-optimized instances to scale network virtual appliances

LATEST GRAVITON3 PROCESSORS

Up to 25% better compute performance and up to 2x faster performance for cryptographic workloads compared to Graviton2 instances

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EC2 Mac instances

ON-DEMAND APPLE SILICON MACOS ENVIRONMENTS FOR THE FIRST TIME ON AWS

M1 Mac

POWERED BY APPLE SILICON

Apple M1 chip integrates the CPU, GPU, Neural Engine, I/O, and so much more onto a single tiny chip

IMPROVED PERFORMANCE

Up to 4x better build performance compared to on premises and up to 60% better price performance compared to x86 Mac instances

HARNESS THE CLOUD

Provision macOS environments within minutes and only pay for what you use. Offload the heavy lifting that comes with managing infrastructure to AWS

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Cost optimization best practices

HOW DOES AWS FOCUS ON COST REDUCTION

MAKE IT CULTURAL

At Amazon, our "frugality" leadership principal ensures that we consider the cost implications of every design or solution

TOOLS AND METRICS

Use the tools and metrics available to you to measure and control usage within the organization

ACCOUNTABILITY

Establish a mechanism to ensure teams identify cost savings opportunities and then track these closely over time

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Cost optimization best practices

COST REDUCTION STRATEGIES FOR EC2

DIVERSIFY YOUR EC2 INSTANCE TYPES

AWS Graviton-based instances offer up to 40% better price performance and AMD-based instances deliver a 10% savings versus comparable x86 based instances

CHOOSE THE RIGHT PURCHASE MODELS

Savings Plans offer a flexible pricing model with savings of up to 72% on your AWS compute usage compared to on-demand

MATCH CAPACITY WITH DEMAND

Available tools, AWS Compute Optimizer and AWS Cost Explorer, provide easy to implement rightsizing recommendations for your workloads

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Outposts

AWS INFRASTRUCTURE AND SERVICES IN YOUR ON-PREMISES LOCATION

AWS DESIGNED

Same AWS-designed infrastructure as in AWS data centers (built on AWS Nitro System)

FULLY MANAGED

Fully managed, monitored, and operated by AWS as if in AWS Regions

AWS API

Single pane of management in the cloud providing the same APIs and tools as in AWS Regions

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

DOP208

Delighting developers: Builder experience at AWS

Speakers

- Adam Seligman, Vice President, Developer Experience
- Emily Freeman, Head of Community Engagement, AWS

Relevant Announcements

- See Notes

Takeaways

- AWS is seeking to reduce friction in developer flow and provide ML assisted code generation, while making it simple to develop and host apps

Concept of Flow & Friction

- A Vision for the Developer Experience
  - A delightful flow
  - For all the developers
  - And every dev team
- CodeCatalyst
  - New – CodeCatalyst – A unified software development service for teams to work together
  - Blueprints, Managed CI/CD Pipelines, Dev Environments
  - Demo – of CodeCatalyst
- CodeWhisperer
  - New – CodeWhisperer –ML driven development, write a comment about what you want to do, CodeWhisperer generates code based on your intent
  - Demo – of CodeWhisperer
- App Composer
  - New – App Composer visualize and build your serverless application
  - Demo – of App Composer
- AppSync – Managed GraphQL provider
- Amplify – Set of tools for building, deploying and hosting full-stack apps
  - Support for Next.js 13 for server-side processing
  - Demo – of Amplify Hosting
  - New – Amplify Studio Form Builder
  - Demo – of Studio Form Builder

Accelerate developer productivity

Support for the most popular programming languages and IDEs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Application Composer

IN PREVIEW

NEW

Visual canvas

Drag, drop, and connect serverless resources to simplify designing applications

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

What is GraphQL?

SIMPLIFIED API STRUCTURES

Unified to access to fetch only the data you need through a single API call

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AppSync benefits for teams

ACCELERATE DEVELOPMENT WITH SIMPLIFIED DATA ACCESS

Create apps faster

Backend and frontend teams can work faster and independently

Build performant apps

Reduce network requests by fetching only the data you need

Built-in security

Utilize auth, encryption, activity logging, and other AWS services for compliance

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Amplify

SET OF TOOLS AND SERVICES FOR EASILY BUILDING, DEPLOYING, AND HOSTING FULL-STACK APPS FASTER

Host a web app

Amplify hosting

Build AWS backend

Amplify Studio
Amplify CLI

Build a web app UI

Amplify Studio

Connect to backend

Amplify Libraries
UI components

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amplify Hosting for Next.js

FULLY MANAGED HOSTING FOR SERVER SIDE RENDERED APPS BUILT WITH NEXT.JS 13

NEW

- Server-side rendering
- Zero-config development
- Integration with AWS services
- Fully managed infrastructure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amplify Studio form builder

BUILD, DESIGN, AND RENDER CLOUD-CONNECTED FORMS FOR ANY API WITH NEW REACT FORM BUILDER

NEW

Forms for any API

Generate forms from an API definition or create new forms from scratch

Design visually

Save time by visually configuring common validation rules

Extend via code

Customize validation rules and form styling in code

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

CON208

Kubernetes virtually anywhere, for everyone

Speakers

- Barry Cooks, VP of Kubernetes at AWS
- Sharmila Ramar, Global Head of Cloud Engineering, MassMutual
- Sheetal Josi, Senior Developer Advocate AWS

Relevant Announcements

❖ See Notes

Takeaways

❖ The journey to app modernization includes containers and container orchestrators (like Kubernetes), AWS is making it easier to start that journey.

App Modernization

- Portability, Infrastructure Efficiency, Performance, Operational Efficiency

Why Kubernetes

- Ease, Consistency, Ecosystem, Community
- On AWS, How and Where You Want/Need It

Customers

- Internet Gaming, ML, Financial Services, Travel Services
  - Watch – MassMutual Journey
  - For all the developers

Kubernetes

- Karpenter for Kubernetes enables cost efficient operations
  - Demo – Karpenter in actioins
- AWS Controllers for Kubernetes (ACK)
  - Provision AWS rresources alongside Kubernetes applications
- AWS Batch for EKS – Fully managed batch computing
- AWS Marketplace Software available within EKS
- EKS Blueprints to get started faster

< Section Header
< Table of Contents

Customer needs

- Get to market faster
- Lower total cost of ownership
- High performance and scalability
- Security and isolation by design

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Why modernize with containers?

Portability	Everything you need to run your application
Infrastructure efficiency	Lightweight – higher density
Performance	Fast start/stop times Easy unit of scale
Operational efficiency	Focus on business logic instead of infrastructure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Why Kubernetes?

Ease	Declarative and self-reconciling Flexible and extensible
Consistency	Same API, regardless of where you run or at what scale
Ecosystem	Hundreds of solutions across the CNCF ecosystem
Community	De facto standard with numerous enterprises helping chart the future

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Kubernetes with AWS

HOW YOU WANT IT, WHERE YOU NEED IT

AWS is pushing the boundaries with AWS Outposts, AWS Wavelength, AWS Local Zones, and now on-premises, edge, and hybrid capabilities

Customer infrastructure | AWS Outposts | AWS Wavelength | AWS Local Zones | AWS Regions

EKS Anywhere | **EKS**

What customers are building

Legacy app modernization
- .NET apps
- Legacy homegrown Linux apps
- Monoliths

AI/ML
- Autonomous vehicles (object tracking, sensor fusion)
- Robotics (vision, grasping, motion control)
- Modeling, training, and inference

Data processing
- Real time
- MapReduce
- Batch

Backends
- Apps and services
- Mobile
- IoT

Web applications
- Static websites
- Complex web apps

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

MassMutual path to modernization

Strategy
- Replatform
- Refactor
- Build new

Pilot
- Move to manage as containers in EKS
- Build new with serverless

Define
- Development practices
- Operational expertise
- Deployment best practices
- Cost management & governance

Optimize
- Decrease build & deployment time
- Reduce TCO and increase ROI
- Increase time to market

Scale
- Organization-wide
- Critical workloads
- Global reach

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Karpenter – Cost-efficient compute for Kubernetes

Karpenter is an **intelligent** and **high-performance** Kubernetes compute provisioning and management solution

Karpenter lets you take **full advantage of AWS** with its deep integration between Kubernetes and Amazon EC2

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Controllers for Kubernetes (ACK)

PROVISION AWS RESOURCES ALONGSIDE KUBERNETES APPLICATIONS

Harness AWS
Create and use AWS resources directly within your cluster; improve reliability and uptime at virtually any scale

Cloud-native control
Kubernetes custom resources and controllers allow you to define the AWS resources your applications need directly within the cluster

Always up to date
ACK generates automatically using the AWS SDKs, this ensures controllers are up to date with the latest features and functionality

github.com/aws-controllers-k8s

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Batch for EKS

Features

- Fully managed batch computing
- Multi-cluster aware scheduling
- Workload-aware scaling and scheduling
- Compatible with any EKS cluster

Use preferred monitoring and governance tooling

Batch manages application isolation from other EKS workloads

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Marketplace software with EKS add-ons

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

EKS Blueprints

An open-source framework that allows you to **configure and deploy complete** clusters

Infrastructure as code with Terraform and AWS CDK

Based on AWS best practices and recommendations

Integrated with popular K8s tools and services

Fully extensible and customizable

Visit EKS Blueprints Quick Start to learn more:

HYB201

AWS wherever you need it

Speakers

- Wayne Duso, Vice President, Storage, Edge, and Data Protection
- Jan Hofmeyr, Vice President, Amazon EC2 Edge

Relevant Announcements

- See Notes

Takeaways

- New tools to help you setup and maintain a controlled environment with enhancements to help simplify your operations

AWS Wherever You Need It

- Customers want to run workloads in a variety of places
- It's challenging when there are multiple tools to manage across thos places
- Reasons why include, need for low latency, local data processing, data residency, migration and modernization
- AWS Extends Cloud to the Edge
- AWS Outposts is not a server, not a rack, it's AWS Cloud running in your datacenter

Customers

- Watch – Fireside Chat with FanDuel about the continuum from Cloud to Edge
- Watch – Video on how Couchbase uses edge computing

AWS Snow Family

- Run applications at the rugged edge or disconnected locations

Smart Devices

- IoT and Embedded Devices to gather and process information
- 5G Workloads on the Edge

SVS210

Accelerating innovation with serverless on AWS

Speakers

- Holly Mesrobian,VP of Serverless Compute at AWS
- Guillermo Rauch, CEO Vercel
- Sheen Brisals, Senior Engineering Manager, The Lego Group

Relevant Announcements

❖ See Notes

Takeaways

❖ Let AWS focus on the infrastructure so you can focus on your applications.

Why Serverless

- Continuous Scaling, Fault tolerance built-in, Pay for value, Minimal maintenance, Functions and Containers
- Compute Operating Model. A lot less to manage with Serverless

Customer

- Reduce / Lift & Shift / Modernize
- Watch – Sheen Brisals – The Lego Group, Migrating a Mission Critical application to Serverless
  - Architecture, Motivations, Key Learnings
- Watch – Guillermo Rauch, CEO Vercel – How Serverless applications are built.

Innovations

- Reduce / Lift & Shift / Modernization
- New – Lambda SnapStart
  - SnapStart for Java delivers up to 10x faster startup performance
- Security – AWS takes care of underlying security
  - New - Inspector for Lambda Functions
- New – ECS Service Connect, focus on application code and not on networking infrastructure
- Lambda Function URLs make it easy to expose services

< Section Header
< Table of Contents

Computing evolution

SERVERLESS
- Continuous scaling
- Fault tolerance built-in
- Pay for value
- Minimal maintenance
- Functions and containers

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Compute operational models

What you manage: Least → Most

	AWS manages	Customer manages	
AWS Lambda Serverless functions	Data source integrations Physical hardware, software, networking, and facilities Provisioning	Application code	
Amazon ECS on AWS Fargate Serverless containers	Container orchestration, provisioning Cluster scaling Physical hardware, host OS/kernel, networking, and facilities	Application code Data source integrations Security config and updates	Network config Management tasks
Amazon ECS on Amazon EC2 Container-management -as-a-service	Container orchestration control plane Physical hardware software, networking, and facilities	Application code Data source integrations Work clusters	Security config and updates, network config, firewall, management tasks
Amazon EC2	Physical hardware software, networking, and facilities	Application code Data source integrations Scaling Security config and updates Network config	Management tasks Provisioning, managing scaling, and patching of servers

Architecture

The Motivations

- Capabilities of the cloud
- Scale as per demand
- Business innovation
- Better observability
- Composable architecture

aws

Key Learnings

- Start simple, evaluate, and evolve
- Incremental and iterative development
- Importance of automation
- Autonomous and product-focused teams
- Building AWS Well-Architected serverless standards
- Engineering culture: You build it, you run it

aws

AWS Lambda SnapStart

NEW!

SnapStart for Java delivers **up to 10x faster** function startup performance

Typically no changes to your code

No additional cost

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

aws

Security

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

aws

Amazon Inspector for Lambda functions

NEW!

Assess running Lambda functions for software issues

Automatically **map vulnerabilities** detected in function code dependencies

Consolidate your vulnerability management solutions for Amazon EC2, Lambda functions, and Amazon ECR container images

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon ECS Service Connect

Focus on the application code and not on your networking infrastructure

Build resilient applications with health checks and automatic retries on errors

Monitor and operate your applications with rich metrics in the Amazon ECS Console

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon ECS Service Connect – How it works

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Workload support

AWS Lambda function URL

Part of the AWS Lambda service

A separate resource in AWS CloudFormation

Generates a unique URL to invoke an AWS Lambda function

Can point to $LATEST or a user–defined alias

https://<url-id>.lambda-url.<region>.on.aws/

Analytics

- ANT205 – Achieving your modern data architecture
- ANT207 – What's new in AWS streaming
- ANT208 – What's new in Amazon Athena
- ANT223 – Simplify & accelerate data integration & ETL modernization w/AWS Glue
- ANT302 – What's new with Amazon EMR
- ANT336 – Building data mesh architectures on AWS

< Table of Contents

ANT205

Achieving your modern data architecture

Speakers

- Santosh Chandrachood, General Manager, Amazon

Announcements

- Zero-ETL from Aurora to Redshift
- Redshift integration with Spark
- Data Zone

Takeaways

- AWS's 5 Pillars of Modern Data Architecture and a sampling of how AWS services enable them.
- Data Mesh considered obsolete by Gartner?

Azure

- This was a highly AWS specific take on Modern Data Architecture. No real comparative resource for Azure, maybe the Big Data Architecture concept.

< Section Header
< Table of Contents

Modern Data Architecture

- Challenges
  - Data Silo Challenges – Amount of Data is Growing, Continue to Proliferate, Struggle to combine them, More people want access, need to scale with high costs.
  - People Challenges – Many users with different skillsets, Data Stewards, Analysts, Engineers, scientists, etc. Each has their own tool preferences, each group with their own required set of internal processes.
  - Business Challenges – High performance with low cost, legacy tech, and agility.

Five Pillars

- Unified Analytics
  - Data Access Everywhere, Bringing your data in, Right tools for analytics
  - AWS Examples of Unified Analytics
    - Federated query in Redshift and Athena
    - New - Zero-ETL from Aurora to Redshift
    - New – Redshift integration with Spark
- Highest Performance at Lowest Cost
  - Explains how AWS Service innovations improved performance at same or lower cost.
  - Covered performance improvements in Redshift
  - Glue autoscaling ensures your scaling up compute when you need it, and scaling down when you don't.
- Machine Learning Integration
  - Redshift ML - SageMaker allows integration with Redshift so that SQL queries can be used to train and create models using SageMaker's ML tools to use with Redshift.
  - SageMaker Universal Notebooks – Allows data scientists to have integrated experiences with Glue, S3, Spark, EMR and other AWS services
- Unified Data Access, Security, and Governance
  - Lake Formation unifies data governance. More like "Data Lake" governance.
  - New – Data Zone, Manage Data Access and Information across the enterprise.
- Insights for Everyone
  - OpenSearch Serverless, get started searching without having to understand infrastructure
  - SageMaker Canvas, allows users to prepare, build, and test ML models with limited (low-code) technical knowledge
  - Quicksight – Dashboards, Models, and Reports, and quicksight Q for English query reporting.

End to End Data Cycles

- Overview of Ingest, Store, Transform & Catalog, Analyze & Visualize, Predict, Share.
- Managing Data Access is hard. Central vs Mesh.

The Journey to Modern Data Architecture

- Start Small, Scale Fast, Think Big

Modern data architecture

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Broadest and most cost-effective set of analytics services

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Connecting data services and ML to drive more value

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data Governance starts with business

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

End to end data life cycle

Ingest	Store	Transform & Catalog	Analyze & Visualize	Predict	Share
From any source including on-premises, real-time	Any amount of data at Exabyte scale	Data preparation, transformation, and providing seamless data access	End-to-end analytics & visualization for any use case	Most comprehensive set of ML and AI Services	With just a few lines of code

Unified Security, Governance, and Data Access

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Typical architecture

#1: Ingest

Ingesting data from any source including on-premise sources and data that is generated in real-time.

On-premises, Streams, Databases, Logs

AWS Glue ETL

#3: Transform & Catalog

Making it easy to access their data and keeping their data in sync regardless of where it lives

Amazon S3

AWS Glue Data Catalog

#2: Store

Storing both transactional data in databases and analytical data in data warehouses and data lakes at any scale.

#4: Analyze & Visualize

Analyzing data using any of ad hoc queries, distributed frameworks and search engines, and visualize the data on dashboards

Amazon Redshift, Amazon SageMaker, Amazon Athena, Amazon QuickSight, Amazon EMR

#5: Predict

Adding ML-based intelligence to applications without needing ML skills

#6: Share

Sharing new insights to take intelligent, data-driven actions

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Centralized solution challenges

- Central data team becomes the bottleneck
- Fail to scale data consumers
- Unable to discover and consume the data
- No central Data Governance
- Lack of data auditability

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Why data mesh?

- Treats existing data platforms as **independent** domains
- Improves **data governance** by pushing access policy to data domains
- Establishes a **central** mechanism for **data discovery**
- Provides **self-service data sharing** features

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

ANT207

What's new in AWS Streaming

Speakers

- Divya Sridhar, Senior Product Manager Technical, Amazon
- Anusha Dasarakothapalli, Principal Software Engineer, Amazon

Announcements

❖ Lots of incremental announcement. See the What's New Section and 4th Slide in Summary.

Takeaways

❖ Focus on Offloading Capacity Management and Ease of Use.

Azure

❖ Streaming services on Azure are primarily categorized under the Messaging Services category.

Why Streaming

- Data is a perishable resource, streaming data real-time can help you identify problems before they occur.
- Common streaming-data use cases
  - Anomaly and Fraud Detection
  - Tailoring customer experience in real-time
  - Empowering IoT Analytics
  - Nourishing marketing campaigns
  - Real-time personalization
  - Supporting Healthcare and Emergency Services

Streaming Portfolio

- AWS Data Streaming, Processing and Analytics
  - Kinesis Data Streams
  - Kinesis Video Streams
  - Kinesis Data Firehose
  - Kinesis Data Analytics
  - Managed streaming for Apache Kafka

What's New

- Hands Off Capacity Management w/MSK Serverless
  - New – Use MSK Connect with MSK
  - New – MSK Serverless expanded Region Capability
  - New – Hands Off Capacity for MSK Tiered Storage
  - New – Additional Metrics for Kinesis Data Analytics for Apache Flink
- Ease of Use
  - New – Kinesis Data Streams Viewer in AWS Console
  - New – Improved Visibility in Kinesis Data Analytics for Apache Flink with Customized Mtx Windows & 5x Performance Increase in Logging
  - New – MSK Connect now supports private DNS
  - New – Move data directly from Kinesis and MSK to Redshift
  - New – Kinesis Data Analytics launches support for Apache Flink 1.15.2

< Section Header
< Table of Contents

Data streaming workflow

Source
Devices and or applications that produce real-time data at high velocity

Stream ingestion
Data from tens of thousands of data sources can be written to a single stream

Kinesis Data Streams
Amazon MSK

Stream transformation
Records are read in the order they are produced, enabling real-time analytics or streaming ETL

Kinesis Data Analytics
Kinesis Data Firehose

Stream destination
Data warehouse
Data store
Data lake
Analytical tool

Stream insights
Amazon Athena
Presto
Amazon QuickSight

Common streaming-data use cases

- Anomaly and fraud detection
- Tailoring customer experience in real time
- Empowering IoT analytics
- Nourishing marketing campaigns
- Real-time personalization
- Supporting healthcare and emergency services

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time data streaming, processing, and analytics on AWS

Amazon Kinesis Data Streams
Collect and store data streams for analytics

Amazon Kinesis Video Streams
Collect and store video streams for analytics

Amazon Kinesis Data Firehose
Load data streams into AWS date stores

Amazon Kinesis Data Analytics
Analyze data streams with Apache Flink

Amazon Managed Streaming for Apache Kafka
Fully managed, highly available and secure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

What's new in AWS Streaming

Managed Streaming for Apache Kafka

- ✓ Support for tiered storage
- ✓ MSK Serverless support for MSK Connect
- ✓ MSK Serverless available in 11 AWS Regions
- ✓ MSK Connect support for private DNS
- ✓ Native integration with Amazon Redshift

Kinesis Data Streams

- ✓ Kinesis Data Streams Data Viewer in AWS Management Console
- ✓ Native integration with Amazon Redshift

Kinesis Data Firehose

- ✓ Kinesis Data Firehose supports OpenSearch Serverless as a destination
- ✓ Kinesis Data Firehose supports VPC Flow Logs as a source

Kinesis Data Analytics

- ✓ Enhanced metrics
- ✓ Custom Maintenance Windows
- ✓ Improved application performance with logging
- ✓ Support for Apache Flink 1.15.2

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon MSK Serverless

EASILY STREAM DATA WITH AMAZON MSK WITHOUT MANAGING CLUSTER CAPACITY

"Our banking application gets used mostly during business hours. We have to scale our cluster up and down to stay cost-efficient."

"We have sales days every month, and we have to keep rescaling our clusters based on demand. Having an autoscaling feature will reduce our operational overhead."

Customer

- On-demand streaming capacity
- Fully compatible
- Throughput based pricing
- Same security as Amazon MSK
- Auto partition management
- Same high availability

New

- Use Amazon MSK Connect with Amazon MSK
- MSK Serverless expanded Region availability

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon MSK support for tiered storage

New

VIRTUALLY UNLIMITED AND COST-EFFECTIVE STORAGE TIER FOR LONG-LIVED DATA IN APACHE KAFKA APPLICATIONS

Tiered storage provides a new low-cost option that scales to virtually unlimited storage

- Increase your topics' storage without needing to increase the number of brokers
- Reprocess old data in the exact same order in which it was produced
- Save with a low-cost storage tier

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Kinesis Data Analytics for Apache Flink enhanced metrics

New

Kinesis Data Analytics for Apache Flink task managers

Amazon CloudWatch

Use metrics to scale Kinesis Data Analytics Apache Flink applications

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Kinesis Data Streams data viewer in AWS Console

New

INTERACTIVE, NO-CODE DATA EXPLORER

Use cases

1. Preview data quickly
2. Understand record schema
3. Data debugging

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Kinesis Data Analytics for Apache Flink: Improved usability

New

Customize maintenance windows

5x improvement in application performance with logging turned on

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon MSK Connect

EASILY MOVE DATA BETWEEN APACHE KAFKA CLUSTERS AND OTHER SYSTEMS

Fully managed

Fully compatible

Serverless

Autoscaling

New

Amazon MSK Connect private DNS support

- ✓ Keep databases, data warehouses, and other systems like the secrets manager in your own VPC, inaccessible to the internet
- ✓ Use Amazon MSK Connect with Amazon MSK Serverless

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Move data from MSK and Kinesis directly to Amazon Redshift

New

NATIVE INTEGRATION WITH STREAMING ENGINES FOR FAST AND EASY DATA INGESTION

- Create materialized views on top of streams directly
- Achieve low latency in the seconds
- Support up to hundreds of MBps of throughput
- Entirely configurable with SQL
- Define a schema or ingest semi-structured data with SUPER & VARBYTE data types

Learn more: https://go.aws/3eG5kZF

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon Kinesis Data Analytics launches support for Apache Flink version 1.15.2

Kinesis Data Analytics championed Apache Flink Version 1.15.2 release

Focus feature: Async Sink, an AWS contributed feature

A new framework allowing customers to easily create custom sinks

AWS facilitating community project to create a DynamoDB sink using the framework

Build a custom sink in under 20 minutes: https://bit.ly/3VyAkeJ

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

ANT208

What's new in Amazon Athena

Speakers

- Ofer Eliassaf, Director, REM Cloud Infrastructure, Mobileye
- Scott Rigney, Sr. Product Manager, Amazon Web Services

Announcements

- Lots of incremental announcement. See notes and slide 12 for a summary.

Takeaways

- Athena get's faster and new capabilities with SQL v3 engine and Iceberg.

Azure

- I don't believe Azure has Athena like capability. Interestingly Azure Data Lake Storage Gen 2 is a new Athena Connector.

New Features and Capabilities

- New – Athena for Apache Spark.
- New – Athena SQL Engine v3
  - 50+ New SQL Functions, 20% Faster Queries, 100% backwards compatible
  - Faster Queries, on more information, for lower cost
- New – Faster queries with result reuse

How MobileEye Use Athena

- MobileEye is an Autonomous Driving software company. The give an overview of how they chose Athena, and how they use it.

New Data Lake, Connector, and Integration Features

- Presented AWS's view of Modern Data Architecture
  - Data Lakes – Store all your data in open formats. Cost effective storage, Decouple Storage from Compute, Choice of Analytical and ML engines, process data in place.
- New – Capabilities for Apache Iceberg (underlying engine)
  - Create Table as Select (allows you to create new tables as a result of a Select query), Views to hide complex logic, Performance 10x faster queries
  - Merge to sync tables and simplify data prep, Vacuum to manage storage, New formats Avro & ORC.
- New – Expanded fine-grained access controls
- New – Data source connectors

< Section Header
< Table of Contents

NOW AVAILABLE

Amazon Athena for Apache Spark

Get started with interactive analytics on Apache Spark in under a second

Harness Apache Spark for complex, powerful analytics

Spend more time on insights instead of waiting for results

Build applications without managin resources or configuring software

GENERALLY AVAILABLE TODAY

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

Amazon Athena SQL engine v3

Upgrade today to experience multiple improvements and new features

Faster queries at lower cost

More frequent updates and features

Based on open-source Trino, Presto, and AWS-developed innovations for both

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

SQL engine v3 new features and enhancements

FASTER QUERIES AND MORE FREQUENT UPDATES

- NEW — Query result caching
- NEW — Aggregation functions
- NEW — Date & time functions
- UPDATED — Prepared statements
- NEW — Number formatting
- UPDATED — Memory usage
- NEW — More frequent updates
- UPDATED — Geospatial functions
- UPDATED — Syntax enhancements
- UPDATED — AWS Glue metadata
- NEW — Array functions
- UPDATED — Right-join dynamic filter

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

Faster Queries with Result Reuse

New caching feature to accelerate repeat queries and reduce time to insight

5x

Up to 5x faster queries when result reuse is active

$0

No data scanned, so queries are free to you

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

aws

The process that led us to Amazon Athena

Design phase

Initial idea of developing two systems for short/long term storage (cost vs. efficiency)

Started with the long-term storage

Research conclusion: Amazon Athena + S3 parquet files for long term

Solution verification with AWS solution architects

Data-lab in Seattle

Implementation phase

Conclusion verification and POC implementation in the data-lab

Finalizing implementation

Production phase

Usage grew exponentially (usage pattern, amount of data, cost)

Iterative optimizations

Up until now, no need for the short-term storage

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Optimizations toward our current state

Iterative approach

- Query-level optimizations
- Partnered with AWS to reach massive concurrency
- Refactored data model to eliminate joins and align with Athena best practices
- Injected partition projection (geospatial + time)

Our latest optimizations led us to get:

90% Query time decrease

90% Cost decrease

0 bottlenecks across different map activities

10s → 100s concurrent map cell runs per minute

0 concurrency issues

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Modern data architecture on AWS

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New features and capabilities with Iceberg

NEW

CTAS

Easy and fast way to create new tables

NEW

Views

Create views to hide complex logic

NEW

Performance

10x faster queries when using SQL engine v3

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New features and capabilities with Iceberg

NEW

Merge

Sync tables to simplify data prep and updates

NEW

Vacuum

Manage storage and delete records to meet regulatory requirements

NEW

Avro & ORC

New support for Avro and ORC formats

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NOW AVAILABLE

Expanded fine-grained access controls

Apply AWS Lake Formation access control policies to more of your data

Centrally defined table-, row-, and column-level policies in Lake Formation

Now supports all table formats and file types available with Athena

Filtering operations performed natively by Athena for increased performance

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New data source connectors

DATA SOURCE CONNECTORS FOR IN-PLACE ANALYTICS

Easy to set up and query

Use the Athena console to create and configure your connectors, then run SQL queries

Secure cross-account access

Deploy and configure one connector, then use flexible IAM policies to enable cross-account access to other analysts

Open-source and fully supported

Athena connectors are open-source, so you can use our code as a starting point to building your own

NEW

Azure Data Lake Storage Gen2
Azure Synapse
Cloudera
Google BigQuery
Hortonworks
IBM Db2
Microsoft SQL Server
Oracle
SAP HANA
Snowflake
Teradata

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

aws

What's new with Amazon Athena

KEY TAKEAWAYS TO APPLY TO YOUR WORKLOADS TODAY

- **Amazon Athena for Apache Spark** – Available today! Sub-second startup for interactive Spark analytics. Check out **ANT209** to learn more
- Upgrade to **SQL engine v3** for faster queries and more analytics features
- Turn on **Query Result Reuse** for cached results
- Expanded support of **Apache Iceberg** and **AWS Lake Formation**
- **New data source connectors** and **Amazon AppFlow** help you expand analysis and break down data silos
- And many more …

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

ANT223

Simplify & accelerate data integration & ETL modernization w/AWS Glue

Speakers

- Roberto Santos Filho, IT Superintendent, Banco Itau Unibanco
- Santosh Chandrachood, General Manager, Amazon
- Moises Nascimento, Director, Itau Unibanco S/A

Announcements

❖ Lots of incremental announcement. See notes and slide 12 for a summary.

Takeaways

❖ Great Overview of Glue. If you don't know what Glue entails this is a great session. Also Itau's approach to Data Strategy is interesting.

Azure

❖ Azure's Data ETL/Pipelining tools is Data Factory.

< Section Header
< Table of Contents

Trends & Challenges in Data Integration

- Business Challenges - Lack of Agility, Lack of Self-Service, Missed SLAs
- Data Engineering Challenges – Infrastructure Management, Multiple Tools, Scalability Issues
- Leadership Challenges – Expensive, No multi-persona support, Lock-in
- Data & Pipeline Challenges (See Slide 2 & 3)

Glue Overview

- Why Glue?
  - Focus on Data not Infrastructure
  - Serverless so scales on Demand
  - Based on Open-Source Engines
  - Works for a variety of workloads and personas
- New – Support for Cloud Shuffle Plugin
  - Improves reliability for Spark jobs by allowing rebalance of storage across clusters
- New – Glue 4.0
  - Upgrades Glue Engine to latest tools for Spark, Python, Scala
  - Spark Connector for Redshift Integration
- New – Glue with Ray
  - Upgrades Glue Engine to latest tools for Spark, Python, Scala
  - Allows Python jobs to scale across multiple nodes for large workload processing.
- New – Native support for Hudi, Delta Lake, Iceberg
  - These technologies bring transaction capability to Data Lake stores
  - Glue now supports this capability natively, no connectors needed
- New – Custom Visual Transforms
  - Build and Share Custom transformations across the organization
- New – Glue Git Integration
  - Manage version and configuration with your favorite Git repository.
- New – Data Catalog Capabilities
  - Makes it easier to track, audit and manage data & access.
- New – Data Catalog Crawler Capabilities
  - Cross Account Capability, Snowflake, MongoDB.
- New – Data Quality
  - Demo.

Why Itau Chose Glue for Data Mesh

- Watch Here.
  - Leveraged AWS and Glue to build a Modern Data Mesh platform.
  - Formulating a Data Mesh Strategy
  - Built a canonical data model to identify domains of data
  - Establish Governance
  - Data Security vs Democratization
  - Data Privacy vs Massive Data Usage
  - Governance vs Agility
  - Centralization vs Scalability
  - Think Product when you think data
  - Example of how Glue helped them achieve visibility of Payments.

Data integration process

1) Motivation (use case examples)

New business report request | Or | Data pipeline between teams | Or | Research using data from several sources for Machine learning

2) Build

Define → Author → Transform → Test

Requirement Specification → Access Data → Structure Data → Clean, aggregate etc. → Visualize & Validate

Debug and Iterate

System failure, data growth, bugs, corrupt data

3) Operationalize

Troubleshoot ← Monitor ← Build workflow & schedule ← Set SLA

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data challenges

- Growing exponentially
- From new sources
- Increasingly diverse
- Analyzed by many applications

- Limited by scale and cost as data volumes grow
- It take months to introduce new data source
- Transformation requires more processing power than companies have
- Challenges to manage security and reliability when used by multiple applications

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data integration and ETL is HARD

Databases
SaaS Apps
3P data
Media
Data Streams

DATA SOURCES

- Complex application code
- Cumbersome retry logic
- Pipeline management
- Need specialized ETL skills

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Glue

Focus on data
Low maintenance serverless solution

Scale on demand
Avoid licensing cost and infrastructure idle time

Powerful open source engines
No lock in, support from wide innovative eco system

All in one
Support all your users personas and workloads

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Glue overview

SERVERLESS DATA INTEGRATION SERVICE

Connectors
- Data warehouse
- Data lakes
- Marketplace
- NoSQL
- Streams

Author
- Visual
- Notebook
- Built-in transformations
- IDE

Operationalize
- Workflow
- Monitoring
- Schedule

Data Management
- Data Catalog
- Data quality
- Sensitive data detection

Engines
- Serverless infrastructure
- Choice of data integration engines
- Compliance and security
- Stream data processing

New

Announcing:
Cloud Shuffle Storage Plugin improves fault tolerance

- Shuffles in Spark occur when data needs to be redistributed across the cluster
- Shuffles are constrained by local disk capacity
- Cloud shuffle reduces Spark shuffle failures
- Native support on AWS Glue 3.0+ with Amazon S3
- Open binaries under the Apache 2.0 license

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New

Announcing Glue 4.0

FAST, PREDICTABLE, AND COST-EFFECTIVE

Upgrades Glue engine

Apache Spark	Apache Spark 3.3.0
python	Python 3.10
Scala	Scala 2.12

Adds more options for scaling, storing, and running your jobs

- Performance optimized Spark 3.3
- Distributed Pandas API on Spark - Improved data processing
- **for Amazon Redshift integration Apache Spark – 10x faster in TPC-DS at 3TB scale**

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Preview

Announcing AWS Glue with Ray

SERVERLESS DATA INTEGRATION IN DISTRIBUTED PYTHON

"Ray is an open-source unified compute framework that makes it easy to scale AI and Python workloads"*

- **Scalable to hundreds of nodes**
- **Superfast start and scale up/down time**
- **Familiar Python Primitives, built-in libraries**

*To learn more - visit Ray.io

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New

Announcing:
Native support for Hudi, Delta Lake and Iceberg

Apache hudi | Linux Foundation Delta Lake | ICEBERG

Simplify incremental data processing in data lakes built on Amazon S3

- Built in support to read and write (insert, update and delete)
- No setup, minimal configuration and easy to deploy
- Latest framework versions available with Glue v4.0

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New

Announcing: Custom visual transforms

- (Re)use custom business logic in visual ETL jobs
- Share custom transformations between teams

Benefits:

- Reduces dependence on Spark developers
- Maintain and update jobs more easily
- Custom visual transforms work in both visual and code-based jobs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New

AWS Glue Git integration

GitHub

AWS Glue

AWS CodeCommit

- Track changes to your ETL code and Visual ETL jobs
- Deploy AWS Glue jobs with your existing pipelines and DevOps tools
- Supports GitHub and AWS CodeCommit
- Download/upload AWS Glue jobs in AWS Management Console

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New

Data Catalog – Capabilities

- Audit with CloudWatch Catalog Metrics
- Federate Hive MetaStore and Access with Athena, RedShift and Glue
- Database, Connection Tagging
- Sync Delta Lake Metadata in Catalog to enable column permissions

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Glue Data Catalog - Crawlers

New

Simplified monitoring with properties and metrics associated with past crawler runs

Cross-account crawling with Lake Formation

Faster Incremental crawling for existing Catalog Tables

Table and column stats collection

Catalog SnowFlake, MongoDB Atlas

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Glue Data Quality Features and Benefits

Preview

- Serverless, scalable and performant
- Data Quality Recommendations
- Out-of-the-box data quality rules and actions
- Data Quality Definition Language
- Data Quality for data-at-rest and data-in-transit
- Supports multiple persona

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

How it works: Data Quality on AWS Glue Data Catalog

Preview

Data Steward → Selects a dataset in AWS Glue Data Catalog → AWS Glue Data Quality analyzes data and recommends rules → Data Steward refines the rules to create finalized rules → AWS Glue Data Quality Evaluates rules → Data Steward reviews results and alerts, takes appropriate action

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data Platform - Itaú

ANT302

What's new with Amazon EMR

Speakers

- Neil Mukerje, Principal Product Manager, Amazon Web Services

Announcements

- EMR Serverless, and lots of performance and enhancements. See New links.

Takeaways

- EMR Serverless gives you the power of EMR without having to manage the infrastructure
- Great discussion of Transactional Data Lakes and why they are needed.

Azure

- Azure's Synapse Analytics is the closest service to EMR Serverless. Customers can use Delta Lake or Hudi for Transactional Lakes, although Delta Lake is better supported (IMO)

< Section Header
< Table of Contents

What is EMR

- Runs Big Data Apps using Spark, Hive, Presto, Hbase, Flink
- New – EMR Serverless
- Comparison of EMR On-Premises vs Cloud (blah blah blah)
  - [Editor] If you are still on-prem you are wasting $$$
- Cloud Cost Optimizations through Transient Instances, Spot Instances, or reserved instances.

What's New

- New Enhancements for EMR on EC2
  - Reduced startup time in private subnet up to 30%
  - Reduced task nodes startup time by 30%
  - Better performance with Spark Shuffle awareness
  - Reduced costs, improved performance with EBS GP3 instances
- New Enhancements for EMR on EKS
  - Job Templates – simplifies authoring experience by enforcing common parameters
  - Spark-SQL runner – Execute SQL scripts directly with API
  - DynamoDB connector – Easily Access data in DynamoDB
  - Enhanced job failure messages – show task failure messages
- New - Performance Optimized Runtimes
  - Spark on EMR 3.9x Faster than OSS Spark
  - Spark EMR 6.9 1.3x faster than EMR 6.5
  - Trino up to 4x faster on EMR than OSS
  - Hive S3 Storage Optimizations 15x faster
- New – Engine Improvements (Presto/Trino)
  - Spot Loss Handling – Faster fail on queries when using spot instances
  - Improved join reordering
  - Presto - Enforce fine-grained lake formation policies
  - Trino supports for Iceberg and Delta Lake transactions
  - Trino – HDFS for checkpointing
- New – Hive Engine Improvements
  - Zero-rename Writes, MSCK Optimizations, Parquet Modular Encryption, Fine-grained lake formation policies, 500+ incorporated fixes, Iceberg support in EMR 6.9
  - Glue now supports this capability natively, no connectors needed
- Transactional Data Lakes. More customers investigating or using TDLs (Iceberg, Delta Lake, Hudi) to solve challenges related to
  - New – Iceberg features for Transactional Data Lakes
  - New – Support for OSS Delta Lake 2.1 (Spark3, Trino)

EMR Serverless (New)

- Watch Here.
  - Jobs, Workers, and Pre-Initialized Workers
  - As Jobs are submitted, they acquire workers from a shared pool
  - Support for Multiple Availability Zones for High Availability
  - Can define boundaries for scaling overall, or by job.
  - Spark history service is included to view job history
  - Integrated with Cloud Watch to Monitor EMR Serverless applications
  - Graviton2 Support for lower cost

EMR Studio

- Watch Here.
  - Fully managed IDE for Interactive Notebooks
  - New – Mixed language notebooks, real-time collaboration, SQL Explorer build-in, mount local filesystem into EMR
  - New – Security Enhancements
  - New – Role based access integration with SageMaker

Amazon EMR

EASILY RUN SPARK, HIVE, PRESTO, HBASE, FLINK, AND MORE BIG DATA APPS ON AWS

Latest versions

Updated with latest open source frameworks within 60 days

Support for popular OSS like Spark, Flink, Hudi, Iceberg etc.

Great performance at lower cost

Spark workloads run up to 3x faster compared to open source

50–80% reduction in costs with EC2 Spot, EC2 Savings Plan, Reserved Instances

Per-second billing for flexibility

Use S3 storage

Process data in S3 securely with high performance using the EMRFS connector

Scale Compute and Storage independent of each other

Multiple deployment options

Fully managed, choose multiple deployment options based on your need

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR on EC2 enhancements

Reduce start-up time for Amazon EMR on EC2 cluster in a private subnet by up to 30%

Reduce task nodes start-up time for Amazon EMR on EC2 cluster by up to 30%

Better performance and lower costs with Spark shuffle awareness in managed scaling

Reduce costs and improve performance with EBS GP3 volumes

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Building applications on Amazon EMR on EKS

Job templates

Simplifies job authoring experience for data engineers and scientists by enforcing common parameters

Spark-SQL runner

Execute SQL scripts directly with API without writing any additional code

DynamoDB connector

Easily access data in DynamoDb

Enhanced job failure messages

Show task failure messages in DescribeJobRun API and driver logs for job failures

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR runtime vs. OSS Spark

UP TO 3.9X FASTER PERFORMANCE FOR APACHE SPARK 3.3.0

Spark 3.3.0 on EMR 6.9.0

*Based on TPC-DS 3TB Benchmarking running 6 node C5.9XL cluster and EMR 6.9.0 running Spark 3.3.0

Runtime built on a optimized version of Apache Spark

Best performance

- **Up to 3.9x faster on total time**

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR runtime for Apache Spark: Performance improvements - 2022

Runtime built on a optimized version of Apache Spark

Best performance

- **Up to 1.3X faster on total time**

100% compliant with Apache Spark APIs

Spark 3.3.0 on EMR 6.9.0

*Based on TPC-DS 3TB Benchmarking running 6 node C5.9XL cluster and Amazon EMR 6.5.0 running Spark 3.0

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR runtime vs. OSS Trino

UP TO 3.1X FASTER PERFORMANCE FOR APACHE TRINO 388

Runtime built on a optimized version of Trino

Best performance

- **Up to 3.1x faster on geometric mean**
- **Up to 4.2x faster for total time**

Trino 388 on EMR 6.9.0

*Based on TPC-DS 3TB Benchmarking running 6 node C5.9XL cluster and EMR 6.9.0 running Trino 388

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR runtime vs. OSS Hive

UP TO 15X FASTER PERFORMANCE FOR APACHE HIVE WRITES USING EMRFS S3-OPTIMIZED COMMITTER

Hive write performance with the Amazon EMR Hive zero-rename feature

Best performance:

- **Up to 15x faster writes**

Hive 3.1.2 on EMR 6.5.0

*Based on load phase of TPCx-BB 1 TB Benchmarking running 1 m5d.8xlarge master node, 20 m5d.8xlarge core nodes cluster on EMR 6.5.0 running Hive 3.1.2

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Presto/Trino improvements

Spot loss handling

Improved join reordering, selection and common subexpression removal

Enforce fine-grained lake formation policies (Presto)

Iceberg and Delta support (Trino)

HDFS for checkpointing (Trino)

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Hive improvements

NEW!

Zero-rename Writes

MSCK Optimization

Parquet Modular Encryption

Fine-grained lake formation based policies

Incorporated 300+ improvements, critical fixes into Amazon EMR Hive

Iceberg support in Amazon EMR 6.9

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Transactional data lakes features

TRANSACTIONS, RECORD-LEVEL UPDATES/DELETES, AND CHANGE STREAMS TO DATA LAKES

Ingestion

- Transactions (ACID) - Reader and writer isolation
- Transactions (ACID) - Concurrent write support
- Record level upserts and deletes
- High throughput streaming ingestion
- Spark, Flink, and Java Writer Support
- Automatic compaction of small files
- SQL DML support

Query

- Spark, PrestoDB/Trino, Flink, Hive Support
- Efficient queries across partitions and files
- Incremental query support
- Time travel query support

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Transactional data lakes features

TRANSACTIONS, RECORD-LEVEL UPDATES/DELETES AND CHANGE STREAMS TO DATA LAKES!

Administration

- Async background compaction of files
- Async background sorting and clustering of keys
- Automatically clean up files beyond retention period
- Metrics for past commits or rollbacks

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Apache Iceberg

NEW!

OPEN TABLE FORMAT FOR HUGE ANALYTIC DATASETS

Apache Iceberg 0.14.1 is packaged as a library for Spark3 Runtime, Trino, Flink, and Hive in EMR 6.9.0.

Key new features include:

Apache Iceberg

- Time travel support with Spark SQL and Trino SQL
- Merge on Read (MoR) support
- Optimistic concurrency with AWS Glue Data Catalog
- Disaster recovery with S3 access points
- Flink and Hive integration (EMR 6.9.0)

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

OSS Delta Lake

OPEN-SOURCE STORAGE FRAMEWORK THAT ENABLES BUILDING A LAKEHOUSE ARCHITECTURE

DELTA LAKE

OSS Delta Lake 2.1.0

OSS Delta Lake 2.1.0 is packaged as a library in EMR 6.9.0

Engines supported : Spark3 and Trino

To learn more :

https://docs.aws.amazon.com/emr/latest/ReleaseGuide/emr-delta.html

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon EMR Serverless

All the benefits of EMR without managing clusters and servers

- Run frameworks more easily; just pick a version and run
- Automatically scale; don't guess cluster sizes
- Optimize cost; Automatic and fine-grained scaling reduces cost
- Performance-optimized version delivers 2x better performance
- Multi-AZ resiliency from day 1
- Integration with familiar tools like Apache Airflow

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Jobs

Run jobs on applications

Can run multiple jobs on an application

Can control authorization using per-job execution role

Workers

Spark HIVE

Internally used to execute your workloads

Workers run the OSS framework you choose

You can change the size of workers to control performance

Pre-initialized workers

Spark HIVE

Optional feature to pre-initialize workers

Jobs start immediately

Helps you maintain a warm pool

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

Amazon EMR Serverless

ALL THE BENEFITS OF EMR – WITHOUT MANAGING CLUSTERS

- AWS Graviton2 Support
- Application capacity and job metrics in Amazon Cloudwatch
- Live debugging of jobs
- Fast Fine-Grained Auto Scaling
- Auto stop Auto start

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

EMR Studio

FULLY MANAGED IDE FOR INTERACTIVE DATA ANALYTICS: DEVELOP, VISUALIZE, AND DEBUG APPLICATIONS

- Single sign-on integration with IdP
- Fully-managed Jupyter Notebooks
- Integrated with Git Repositories
- Simplified debugging with Spark UI and YARN UI
- Browse, create, or delete EMR clusters
- Run Notebooks in workflows using APIs
- Run interactive data analysis using EMR on EKS clusters

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

EMR Studio features

NEW!

FULLY MANAGED IDE FOR INTERACTIVE DATA ANALYTICS: DEVELOP, VISUALIZE, AND DEBUG APPLICATIONS

- IAM authentication and federation support
- Multi-language support (R, PySpark, Scala, SQL)
- Auto-terminate idle clusters
- Real-time co-authoring of notebooks
- SQL explorer with Presto support
- Mount workspace directories to EMR clusters
- Latest JupyterLab, JEG, Livy, SparkMagic

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Security pillars

Isolation	Authentication	Authorization	Encryption	Audit
VPC	LDAP	Cluster IAM Role	Encrpytion at rest	Audit using Ranger
Private subnets	Kerberos	FGAC using Apache Ranger	Encrpytion in transit	Audit using AWS Lake Formation NEW!

ANT336

Building data mesh architectures on AWS

Speakers

- Travis Muhlestein, Chief Data & Analytics Officer, GoDaddy
- Nivas Shankar, Principal Product Manager, AWS
- Ian Meyers, Director of Product Management, Amazon Web Services

Announcements

- None

Takeaways

- Good overview of modern Data Mesh and how it might be realized on AWS
- In 2022 Data Management Hype Cycle Gartner proclaims Data Management Obsolete before plateau.

Azure

- You can build a Data Mesh architecture in Azure too.

< Section Header
< Table of Contents

Modern Data Strategy & Challenges

- See ANT205 – Achieving your modern data architecture

Why Data Mesh

- Acknowledges that data challenges exist and seeks to work within those constraints.
  - Use existing investments in data platforms and treat them as independent domains
  - Improve data governance by pushing policy down to data domains
  - Provides a clear mechanism for centralized data discovery
  - Provides self-service data sharing features to allow owners to grant access to consumers
  - Allows leaders to measure and invest in data products based on usage and business value.

Design Goals & Core Principles - Watch

- Four core principles of a Data Mesh Architecture
  - Data domain ownership
  - Data as a Product
  - Federated computational governance
  - Self-serve Sharing
- Data Mesh Design Goals
  - Enable organizations to get value from data at scale
  - Create business-oriented data products that can support the top strategic goals
  - Allow business domains federated governance through lightweight centralized policy by removing bottlenecks
  - Encourage data-driven agility
  - Support the sharing of data products, with the goal of delighting the experience of data users
- Data Mesh Architecture – How it might look in AWS
  - Decentralized, lightweight federated governance across domain-oriented data systems to drive governed sharing.
  - Lake Formation and Data Zone allow for policies on what the data is and who can access it.

Favorite Quotes

- “Everyone wants to be a data consumer, no one wants to be a producer”

Why GoDaddy built a Data Mesh

- Watch
- Business Outcomes of the Strategy
  - Created hierarchical views of data products at different levels so that business users can analyze information to make quicker business decisions
  - Automated access management framework to enable self-served access to data within and across lines of business
  - Accelerated the data platform adoption to 10+ LOBs and 300+ teams globally
  - Enabled data scientists to find and access data needed to generate ML models across LOBs
  - Achieved 10s of millions of dollars in cost savings from data reuse and better management of purchased datasets.

Why data mesh?

Use existing investments in data platforms and treat them as independent "domains"

Improve data governance by pushing policy down into data domains

Provides a clear mechanism for centralized data discovery

Provides self-service data sharing features to allow domain owners to grant access to consumers

Measure and invest in data products based on usage and business value

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh: Four core principles

Data owner

Data domain ownership

A data mesh features data domains as nodes, which exist in data lake accounts; it is founded in decentralization and distribution of data responsibility to people closest to the data

Data engineer

Data as a product

A data producer contributes one or more data products to a central catalog in a data mesh account; DaaP must be autonomous, discoverable, secure, and correct, and useable

Data steward

Federated computational governance

Federated data governance is how data products are shared – delivering discoverable metadata auditability based on federated decision-making and accountability structures

Data consumer

Self-serve sharing

The platform streamlines the experience of data users to discover, access, and use data products; it streamlines the experience of data providers to build, deploy, and maintain data products

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh design goals

Enable organizations to get value from data at scale

Create a business-oriented data products that can support the top strategic goals

Allow business domains federated governance through lightweight centralized policy by removing bottlenecks

Encourage data-driven agility

Support the sharing of data products, with the goal of delighting the experience of data users

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh architecture

DECENTRALIZED, LIGHTWEIGHT FEDERATED GOVERNANCE ACROSS DOMAIN-ORIENTED DATA SYSTEMS TO DRIVE GOVERNED SHARING

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh principle #1: Data domain ownership

DATA OWNERS ARE ACCOUNTABLE FOR THEIR DATA PRODUCTS TO BE RELIABLE, AVAILABLE, AND ACCURATE

Data owner

Accountability for data domain and consumption of data products

Create
Owns data **created** or **transformed** in my organization

Store
Owns data **stored** in my organization

Share
Owns how my organization **uses** the data

- Register and catalog data assets
- Protect and secure organization data
- Manage data quality
- Maintain ease of use and atomic integrity

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh principle #2: Data as a product

DOMAIN-DRIVEN DESIGN TECHNIQUES TO FORMULATE AND ESTABLISH BOUNDED CONTEXTS FOR DATA PRODUCTS

Data engineer

- Each team manages their data and organizes it as data products
- Each product provides an interface(s) to allow others to interact (e.g., APIs, SQL, reports)
- Remove usability frictions, meet the user where they are
- Provide all supporting metadata, lineage
- Data products are valuable on their own

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh principle #3: Self-serve sharing

ECOSYSTEM OF SELF-SERVE DATA INFRASTRUCTURE WITH OPEN PROTOCOLS

Data consumer

- Design for generalist majority (i.e., make it easy to use and adopt with no specialist skills needed)
- Enable personas to discover, learn, understand, consume, and maintain data products
- Collection of interoperable data products, which enable cross-functional domains to produce and consume data easily and with autonomy and will allow it to scale
- Data products must include data, metadata, code, and policy all as single unit of value
- Abstract complexity through automation

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh principle #4: Federated data governance

GOVERNANCE MODEL THAT EMBRACES DECENTRALIZATION AND DOMAIN SELF-SOVEREIGNTY THROUGH DECISION-MAKING MODEL LED BY FEDERATION OF DATA PRODUCT OWNERS

- Decentralization implementation of governance team and standard authorization
- Governance team = a guild consisting of representatives of all teams taking part in the data mesh
- They create global policies and standardization to achieve interoperability
- Automated execution of policies by the data domains (e.g., data classification and privacy, compliance, security, documentation, and interoperability)

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data mesh architecture pattern: Data lake data products sharing

Multi-domain federated customer actions

Data mesh

GoDaddy conceptual/ domain architecture

Architecture

- ARC311 – Build production-ready prototypes rapidly using serverless
- ARC313 – Building modern data architecture on AWS

< Table of Contents

ARC311

Build production-ready prototypes rapidly using serverless patterns

Speakers

- Kwonyul Choi, Software Development Engineer, AWS

Announcements

- N/A

Takeaways

- With a Cloud Native stack and Iterative development methodology you can take an idea from requirement to production ready prototype. This session covers methodology and tool selection along the way
- Good if you want to get an understanding of how to get a custom solution off the ground.

Azure

- N/A

Prototyping

- Demo -> Production
  - Prototyping is a tradeoff between completeness and velocity.
  - Effective prototyping can be done with a Cloud Native mindset
  - Prototyping is best delivered iteratively

Scenario

- Requirement – Provide review service with real-time sentiment analysis, so that customers can get more information to make a purchase
- Demo – Sentiment analysis
- PoC – Review request with sentiment analysis
- Evolvable Architecturee to satisfy the functional and non-functional concerns

Deployed Solution

- Production Ready Prototype

Building modern data architectures on AWS

Speakers

- raghavarao sodabathina, Principal Solutions Architect, Amazon Web Services

Announcements

- N/A

Takeaways

- A good overview of AWS take on Modern Data Architecture with detail on the various services and patterns to implement it.
- Worth the watch if you are undertaking a data architecture initiative.

Azure

- N/A

Why Modern Data Architecture (MDA)?

- Big opportunities, but Big challenges too
- Blah Blah Blah
  - Legacy to Scalable, Take advantage of ML capabilities to deliver new experiences, all at a right-sized cost.

Getting There

- First Step – Data Discovery Process
  - https://docs.aws.amazon.com/wellarchitected/latest/analytics-lens/data-discovery.html
- Envision MDA as a stack of 6 layers
  - Watch – Ingestion
  - Watch – Storage,
  - Watch – Cataloging,
  - Watch – Processing
  - Watch – Consumption
  - Watch – Security & Governance

Reference Architectures

- Watch – Streaming, ML, Operational Analytics and More

Best Practices

- Watch – Best Practices and Key Takeaways

< Section Header
< Table of Contents

Create better business outcomes with data

- Make better, faster decisions
- Improve customer experience and loyalty
- Stay ahead of the competition
- Prepare for the future
- Reduce costs and reimagine processes

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

However, challenges are in the way

- More data than ever is being generated
- Data of all types is stored in silos across multiple data stores
- Machine learning adoption is challenged by lack of skills and organizational inertia
- Data security, privacy, and compliance regulations are increasingly important

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Modern data architecture

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Modern data architecture on AWS

Modern data architecture pillars

- Data at any scale
- The best price performance
- Seamless data access
- Unified governance
- AI and ML to solve business challenges

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data discovery

FIRST STEP IN BUILDING MODERN DATA ARCHITECTURES

The data discovery process consists of a number of interactive sessions with various stakeholders within an organization

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

https://docs.aws.amazon.com/wellarchitected/latest/analytics-lens/data-discovery.html

Building modern data architecture

ENVISION A MODERAN DATA ARCHITECTURE AS A STACK OF SIX LAYERS

1. Data ingestion	2. Data storage	3. Data cataloging	4. Data processing	5. Data consumption	6. Security and governance
Bring the data into your data platform	Store your structured and unstructured data	Store your metadata	Create data processing pipelines	Enable your user personas for purpose-built analytics and machine learning	Protect your data across the layers and data access management

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Layered modern data architecture

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data ingestion layer

Ingest data from a wide variety of data sources to support unique data sources and data types

The typical list of data sources

Database data sources

Files shares

SaaS applications

Partner data feeds

Third-party data products

Custom data sources

Streaming data sources

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data storage layer

The storage layer consists of Amazon S3 and Amazon Redshift, an integrated storage layer for the modern data architectures on AWS. You can put datasets into three different areas in S3 data lake: raw zone, cleaned or transformed zone, and curated zone

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data catalog layer

AWS Glue Data Catalog provides the central catalog to store metadata for all datasets hosted in the storage layer

- No movement of data = Low Costs/Admin
- All metadata centrally available for search and query = Productivity
- Unify structured, semi-structured data = Speed to Insight
- Automate data discovery = Productivity

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data processing layer

Data processing pipelines can be multistep data processing pipelines or scheduled data processing pipelines on a regular interval or we can also invoke data processing pipelines based on event triggers

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data consumption layer – data services

The modern data architecture on AWS powers deeper and faster purpose-build data services for a wide variety of use cases

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Security and governance layer

Data governance is the combination of people, processes, and technology that organizations use to ensure the quality and security of their data throughout its lifecycle

AWS Services

Modern data analytics reference architecture on AWS

BUILD DATA ANALYTICS PIPELINES USING MODERN DATA ANALYTICS APPROACH TO DERIVE INSIGHTS FROM THE DATA

1. Data is collected from multiple data sources across the enterprise, SaaS applications, edge devices, logs, streaming media, and social network
2. Based on the type of the data source, **AWS Database Migration Service, AWS DataSync, Amazon Kinesis, Amazon Managed Streaming for Apache Kafka, AWS IoT Core**, and **Amazon AppFlow** are used to ingest the data into a Data Lake in AWS
3. **AWS Data Exchange** is used for integrating third-party data into the Data Lake
4. **AWS Lake Formation** is used to build the scalable data lake, and **Amazon S3** is used as the data lake storage
5. **AWS Lake Formation** is also used to enable unified governance to centrally manage the security, access control, and audit trails
6. **AWS Glue, AWS Glue DataBrew,** and **AWS Glue Elastic Views** are used to transform, enrich, move, and replicate data across multiple data stores and the data lake
7. **Amazon Kinesis Data Analytics** is used to transform and analyze streaming data in real time
8. **Amazon QuickSight** provides machine learning-powered business intelligence
9. **Amazon OpenSearch Service** can be used for operational analytics
10. **Amazon Redshift** is used as a Cloud Data Warehouse
11. **Amazon EMR** provides the cloud big data platform for processing vast amounts of data using open source tools
12. **Amazon SageMaker** and **AWS AI services** can be used to build, train, and deploy machine learning models, and add intelligence to your applications
13. **Amazon Redshift Spectrum** and **Amazon Athena** enable interactive querying, analyzing, and processing capabilities

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Reference Architecture

http://bit.ly/3VoIVQE

Modern data streaming architecture

INGEST, PROCESS, AND ANALYZE HIGH VOLUMES OF HIGH-VELOCITY DATA FROM VARIOUS SOURCES IN REAL TIME

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

https://go.aws/3bt0HAm

Best practices

1. Data discovery should be your first step in building modern data architectures
2. You must define business value and then identify your data sources and user personas to achieve desired business outcome
3. Migrate and modernize your operational databases into cloud with purpose-build databases to reduce operational overhead and to improve your applications performance
4. Data tiering – organize the data in raw zone, transformed zone, and curated zone for your data lake storage. Keep untouched original raw data, ideally with no transformations applied. It will be treated as golden source in case of reprocessing needs.
5. Use Amazon S3 storage classes – use Amazon S3 Standard for both raw zone and transformed zone as they are kind of temporary storage areas for data lake. We recommend using S3 Intelligent Tiering for curated zone because it automatically moves data sets between the access tiers that are not accessed for months at a time

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Best practices

6. Use IAM control across for Amazon S3 and all other AWS data services. Create IAM roles for different user groups. If possible integrate it with Federated IP like Active Directory.
7. Encrypt your data at rest and in-motion
8. You can use IAM coarse-grained access controls and AWS Lake Formation for fine access controls for your data lake access management
9. Store the data in the optimum format

File Format	Properties	Use Cases
Orc	Columnar, schema stored in footer	Read heavy analytics workloads, e.g., Hive Tables
Parquet	Columnar, schema stored in footer	Read heavy analytics workloads, e.g., Spark processing
Avro	Row-major, schema and data separate	Write heavy workloads, e.g., Apache Kafka
CSV	Human readable , fixed schema	Small volumes, consumer is an analyst
JSON	Human readable , flexible schema	Small volumes, consumer is an application

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Best practices

11. Automate data pipelines by AWS Step functions or AWS Glue workflows or Amazon Managed Workflows for Apache Airflow. Monitor data pipelines with CloudWatch dashboards and setup alarm for for unnormal behavior, i.e., "no data ingested in last 6 hours, etc.

12. Choose your data processing services based on your specific use case and business requirements

AWS Lambda

Simple programming interface and scaling

- Serverless functions
- Six languages
- Event-based, stateless processing
- Continuous and simple scaling mechanism

Kinesis Data Analytics

Easy and powerful stream processing

- Serverless applications
- Apache Flink
- Stateful processing with automatic backups
- Stream operators make building app easy

Amazon EMR

Flexibility and choice for your needs

- Choose your instances
- Use your favorite open-source framework
- Fine-grained control over cluster, debugging tools, and more
- Deep open-source tool integrations with AWS

AWS Glue

Serverless data integration

- Choose if you are already using AWS Glue or Apache Spark
- You need to process data in batch, streaming, and event modes
- You want to build your streaming jobs visually
- Near real-time use cases – your SLA is 1 second or more

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Best practices

13. Choose your streaming services based on your specific use case and business requirements

Amazon Kinesis Data Streams

- Streams and shards
- Throughput provisioning model
- Seamless scaling
- Typically lower cost
- AWS application programming interface experience
- Deep AWS integrations

Amazon MSK

- Topics and partitions
- Cluster provisioning model
- Scaling isn't seamless to clients
- Raw performance
- Open-source compatibility
- Strong third-party tooling

14. Choose right Adhoc query engine based on your use case and business requirements

Amazon Athena

- Ad-hoc querying
- Serverless – no management of clusters
- Run queries using the standard SQL

Amazon EMR

- Data processing and ETL
- Build your own clusters or use EMR Serverless
- Run custom applications and code using big data processing frameworks such as Spark, Hadoop, Presto, Hbase, etc.

Amazon Redshift

- Data warehouse for historical analysis and reporting
- Build your own clusters or use Redshift Serverless
- Run queries against highly structured data with many joins

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Best practices

15. When to use data mesh architecture

Pros

- Distributed control
- Solutions aligned with business needs
- Data ownership and accountability
- Encourage product thinking

Cons

- Distributed knowledge and control
- Product thinking is not for everyone
- Building data as a product is not simple
- Not always good for small organizations

16. Before framing your business problem, first consider whether ML is an appropriate solution to your problem

17. Use the right tool for the right job by leveraging AWS purpose-built data services. Refer to respective AWS purpose-built data services best practices

- How to plan your database migration & modernization https://aws.amazon.com/blogs/architecture/selecting-the-right-database-and-database-migration-plan-for-your-workloads/

JPMorganChase real-time agent assist for contact center productivity

Speakers

- Ami Ehlenberger, CTO, Machine Learning & Intelligence Operations, JPMC
- Vafa Ahmadiyeh, Principal Solution Architect, AWS

Relevant Announcements

❖ New Feature - Real-Time Transcribe Call Analytics

Takeaways

❖ CCI is an easy way to add AI/ML capabilities to any conversational audio stream.

Azure

❖ Cognitive Services – Speech to Text but must custom build real-time actionable capability.

Add AI to Your Existing Contact Center with AWS Contact Center Intelligence.

- Supports customers who already have Contact Center Solutions from Genesys, 8x8, talkdesk, CISCO, Avaya, etc.
- Uses AWS AI services to address 3 main use cases.
  - Self-Service virtual agents
  - Real-time call analytics & agent assist
  - Post-call analytics
- Leverages AWS Services to satisfy the use cases
  - Lex – Conversational AI
  - Polly – Text to Speech
  - Transcribe – Speech to Text (*New – Real-Time Analytics during live calls.)
  - Kendra – Intelligent Search (Knowledge Base)
  - Comprehend – Natural Language Processing
  - Translate – Machine Translation
  - Chime SDK – Voice Connector (SIP)
- Ami Ehlenberger.
  - JPMC stood up a product team to specifically address call center operations through artificial intelligence and machine learning capabilities.
  - Discusses Pre-Call / In-Call / Post-Call Workflow
  - How can we consume data from workflow and create a better CX
- Product Team.
  - Due to Pandemic, Agents working from home / hybrid environment
  - Lost ability to Team / Help Each Other / Find Information
  - Needed a Real-time Virtual Agent Assistant (EVEE)
  - Built on-prem solution, that took along time, progress over perfection.
  - Found Transcription Accuracy to be significant. “Chase vs Cheese”
  - Moving to Transcribe improved transcription and outcomes
- Knowledge Management
  - Timeboxed adding Kendra to See if there is value
  - Add content from multiple sources.
  - Incorporate agent feedback (created Agent “Champions”)
  - Collected feature requests from Champions to make better
- Architecture / Build Solution
  - Current architecture replaces most on-prem solutions.
  - Detailed dive into on-prem/cloud solution.
  - Load testing was a challenge
  - You can build this yourself (live walkthrough)
  - Demo of live transcribe analytics on newly built solution.
- Resources
  - https://go.aws/cci

Using AI to solve contact center challenges

AWS CCI solutions use cases

ADDRESSING 3 PRIMARY JOBS WITH AI AND AUTOMATION

Self-service virtual agents

- Answer calls without a live agent
- Offload repetitive queries to virtual agents, reduce employee frustration
- Reduce call transfers with intelligent routing to improve agent productivity

Real-time call analytics & agent assist

- Alert supervisor to help improve customer satisfaction
- Provide agents with actionable insights and easy search capabilities from the knowledge base
- Capture insights like customer sentiment, call intent, and more

Post-call analytics

- Identify trends and business improvement opportunities to drive revenue
- Assess agent performance and monitor compliance
- Improve employee retention, reduce operational costs

Powering AWS CCI solutions and Amazon Connect

AWS AI LANGUAGE SERVICES

Conversational AI	Text to speech	Speech to text	Intelligent search	Natural language processing	Machine translation	Voice connector (SIP)
Amazon Lex	**Amazon Polly**	**Amazon Transcribe**	**Amazon Kendra**	**Amazon Comprehend**	**Amazon Translate**	**Amazon Chime SDK**

AMAZON TRANSCRIBE – REAL-TIME ANALYTICS DURING LIVE CALLS

Migration to real-time transcription using Amazon Transcribe

- Improvement in word error rate over incumbent service of ~12%
- Out-of-the-box automated redaction of personally identifiable information
- Redirection of ~3 FTE developers from dedicated support to new feature delivery
- Pilot users called out increase in accuracy in user acceptance tests
- Enabled call intent ML models to analyze calls parallel to transcription API

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

We aim to deliver the right answers to our specialists at the right time

Evaluating Amazon Kendra for retrieving the best knowledge management answer for our specialists resulted in:

- Ability to incorporate agent feedback to improve answer accuracy
- Out-of-the-box filtering capability
- Ability to add content from multiple sources and formats
- Reduction in dev time from weeks to days

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time call analytics and agent assist

REFERENCE ARCHITECTURE

1. Customer audio is streamed real time into AWS
2. Audio is transcribed using Amazon Transcribe
3. The transcribed text is through a NLP model to produce the intent
4. The intent from the model is sent through Amazon Kendra to fetch relevant content
5. The real-time guided content is shown to the agent

AIM314

Accelerate your ML journey with Amazon SageMaker low-code tool

Speakers

- Vadim Omeltchenko, AI/ML SA, AWS
- Ori Goshen, Co-CEO, AI21 Labs
- Claire OBrien, Product Manager, Amazon Web Services

Relevant Announcements

❖ SageMaker now imports data from EMR

Takeaways

❖ A product demo of SageMaker. How to input, train, and deploy models.

Azure

❖ I don't believe Azure has a similar product. The closest product is Azure Machine Learning capability of Azure Synapse Analytics.

Why Low-Code

- Typical ML Workflow (Prepare, Build, Train & Tune, Deploy & Manage)
  - Challenges: Requires Deep Expertise, Experimentation is expensive, data-scientists are in short supply.
  - Low-Code: Faster ML Workflows, Open & Customizable solutions, great for new and experienced practitioners

SageMaker Low-Code Overview

- Data Wrangler (Prepare)
  - Visually aggregate and prepare data.
  - Exploratory Analysis using, ML powered to diagnose data quality issues, SageMaker Clarify integration to detect and mitigate bias, and Quick Model to estimate quality of model
  - Point & Click Data Transformations and Custom Code Editor and Cod Snippets
  - Can export to Python code or Notebook
- Autopilot (Build, Train, Tune, Deploy)
  - AutoML that to select & tune for best model
  - Feature Selection / Data Split (Train / Test),
  - Choose Training Modes (AutoGluon, Hyper Parameter Optimization
  - Model Visibility, Explainability
  - Deploy to SageMaker Endpoint, can be used to make real-time
- Jumpstart (Prebuilt Models)
  - A model hub of pre-trained and easily tunable models.
  - Using Pre-Trained Models Saves Time
  - Models come from publicly available models
  - Includes Sample Jupyter Notebooks
  - Cloud Formation Templates
  - Ability to bring in 3rd Party Commercial Models

Demos

- Demo of Data Wrangler
- Demo of AutoPilot
- Demo of Jumpstart
- Demo of A21 Labs Language Models

< Section Header

Low-code machine learning from AWS

Amazon SageMaker

PREPARE → Data exploration, data preparation, and feature engineering

BUILD → Model development

TRAIN & TUNE → Model training and tuning

DEPLOY & MANAGE → Live or batch predictions: model deployment, hosting, and monitoring

Amazon SageMaker Data Wrangler
A faster, visual way to aggregate and prepare data for machine learning

Amazon SageMaker Autopilot
AutoML capability that automatically prepares your data, as well as builds, trains, and tunes the best machine learning models for your tabular datasets

Amazon SageMaker JumpStart
A model hub of pretrained and easily tunable state-of-the-art models for computer vision and natural language processing tasks

aws

How SageMaker Data Wrangler works

LOW-CODE TOOL FOR PREPARING DATA FOR ML

Amazon SageMaker Data Wrangler
A faster, visual way to aggregate and prepare data for machine learning

Connect & import data
Import data from a wide variety of data sources in various supported formats

Get insights on data quality
Detect data quality issues & bias with automatic analyses & visualizations

Cleanse & enrich
Perform feature engineering with 300+ built-in data transforms
Also bring your own custom transforms

Analyze and visualize
Leverage built-in analyses like target leakage, quick model, and more to understand your data

Export prepared data to train and deploy models
Export prepared data to train & deploy ML models via SageMaker Autopilot, notebooks, or code scripts

How SageMaker Autopilot works

LOW-CODE TOOL FOR BUILDING, TRAINING, AND TUNING MACHINE LEARNING MODELS

Amazon SageMaker Autopilot
A faster, visual way to train, tune, and deploy ML

Upload data and select target
Load tabular data from S3 and select target column for prediction

Automatic model creation
Automatic feature selection, feature engineering, and selection of algorithms and training modes

Model leaderboard
Review model leaderboard to deploy the best model endpoint for inferencing

Full visibility and controls
Data exploration, model insights, and explainability reports

Evaluate, deploy, and register models
Auto-deploy or one-click deploy Autopilot model; easily build training, evaluation, and deployment ML workflows

Experimentation → Customize & optimize → Move to production

aws

aws

AIM321

Productionize ML workloads using Amazon Sagemaker MLOps featuring NatWest

Speakers

- Shelbee Eigenbrode, Principal AI/ML Specialist, WW MLOps Lead, AWS
- Greig Cowan, Head of Data Science, NatWest Group
- Usman Anwer, Principal Product Manager, AWSRelevant

Announcements

❖ n/a – although new improvements are shown.

Takeaways

❖ NatWest Case Study is best section of this session. How to scale your MLOps w/Vision, Metrics and Outcomes.

Azure

❖ Azure ML standardizes on the Mlflow open-source framework for MLOps.

What is MLOps

- The process of continuously delivering high-performance ML Models at scale. DevOps for Machine Learning.
- People, Process, Tools
- Overall, a weak definition of MLOps. A better overview can be found on Nvidia's site here.

How does Sagemaker Support MLOps

- This session focuses on the Model Lifecycle
  - Project Environment Creation
  - Model Training
  - Model Registry
  - Model CI/CD Pipelines
  - Model Deployment
  - Model Monitoring

What's new in SageMaker for MLOps

- Pipeline (CI/CD) Improvements
  - Local Mode: Helps to run, test pipelines locally, to reduce cycle time and costs during pipeline creation. Deploy to cloud when ready.
  - AutoML Support: Allows the pipelining of AutoML jobs in workflow.
  - Cross-Account Sharing: Coordinate pipelines across enterprise accounts
  - SDK Simplifications: Improved Python SDK Capabilities
- Model Monitor
  - Batch Inference: New capability to Monitor Batch Inference Models
  - Demo of Batch Inference Model Monitoring

Scaling MLOps

- Initial, Repeatable, Reliable, Scalable

NatWest Case Study

- Challenges around People, Process, Data, Technology.
- Established Metrics to solve these for Faster Time to Value
  - Faster delivery of end-to-end solutions (> 12 mos) => (< 3 mos)
  - Simplified discovery and access to data (> 5 Days) => (< 1 day)
  - Simplified ML Model Route to Production (> 6 mos) => (< 2 weeks)
  - End User self-service environment creation (> 50 days) => (< 2 days)

< Section Header
< Table of Contents

MLOps use cases

CONTINUOUSLY DELIVER HIGH-PERFORMANCE ML MODELS AT SCALE, FASTER

Develop

- Provision environments
- Perform experiments

Deploy

- Automate model training
- Package and test models
- Deploy and monitor models

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Press Esc to exit full screen

Scaling MLOps: Maturity framework

	Initial	Repeatable	Reliable	Scalable
KPI	Time to POC	Model deployment time	ML defect rate	MLDC cycle time
Capabilities	• Access to resources • Standardize experimentation environments & processes • Track experiments	• Automate governed access to resources • Automate model-build and deployment tasks • Standardize source-code repositories • Centralize management of models	• Integrate full CI/CD practices into ML pipelines for traceability, improved quality, and lineage tracking	• MLDC is reproducible through standardized templates shared across teams

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NatWest Group challenges before MLOps

NatWest Group

People	Process	Data	Technology
Lack of correct training, capabilities	Manual handovers, governance, and long time to value	Data discovery and access difficult	Fragmented and out-of-date environments

Our MLOps vision

1. Automation & standardized patterns
2. Optimized governance
3. Simplified data access
4. Modern tech stack
5. Faster time to value

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Adoption and engagement

BUILDING A LONG-TERM CAPABILITY ACROSS THE ENTERPRISE

NatWest Group

Training

Trained 100s of data scientists, engineers and leaders across >700 AWS courses and Immersion Days

Dedicated support

Established well-resourced (12 FTE) and capable enablement team…

…gathering continuous feedback

Visible metrics

Continually track and report on KPIs related to speed of setup, training completion, use-case success and data access

User champions

Early adopters identified and given priority support to validate and test the capability

Reach far and wide

Project teams and use cases from across the organization, e.g.,

Fraud
Financial crime
Finance
Audit
Credit
Climate
Pricing
…

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Key takeaways

NatWest Group

Hearts & minds

Create a compelling and business-led vision for MLOps

Adoption & engagement support for the user community

Build for complexity

Data scientists & engineers are a smart bunch!

Consider orchestration beyond SageMaker

Bring your own containers & templates

Build for flexibility

MLOps is a journey that you won't take in one step

Deliver value quickly to users and be able to respond promptly to new requests

Operating model

Consider carefully how your users will build ML-driven products

Centralized vs. federated

Standardization frees devs to focus on the value-add

Legacy tech

Build your system to work with legacy estate

Working between cloud and on-premises environments

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

A metric-based approach focused on business value

NatWest Group

Metric	Where NatWest was…	Where NatWest is now
Faster delivery of end-to-end solutions	~12 months	< 3 months
Simplified discovery and access to data	~5 days	< 1 day
Simplified ML-model route to live	3-6 months	< 2 weeks
End user self-service environment creation	> 30 days	< 2 hours

* Other metrics also used during project delivery

AIM332

WaFd bank delivers enhanced self-service with AWS conversational AI

Speakers

- Fernando Egea, Global Vice President, AI Specialized Sales, Talkdesk
- Dustin Hubbard, CTO, WaFd Bank
- Shivi Gupta, Product Manager, Amazon

Announcements

- n/a

Takeaways

- WaFd is using Lex for both IVR and Chatbots. This demo illustrates interaction w/Talkdesk.

Azure

- Azure has Bot Maker, in addition to Cognitive Services to support Speech to Text, Text to Speech. Azure qna maker is being sunsetted in favor of Cognitive Services for language.

Improve Service with CAI

- Conversational AI Solutions
  - Improve Customer Engagement
  - Enable Omni-Channel Experience
  - Uncover insights to improve quality
  - Lower costs with automation
- How Lex Supports CAI
  - Capabilities: Custom entity recognition, Enhanced speech transcription, Intelligent Dialog, Contextual Resolution
- Lex Builder Tools
  - Visual Builder – Manage complex conversation paths dynamically using a no-code interface
  - Automated Chatbot Designer – Expedite chatbot design processes through automated analysis of transcript data
  - Pre-built Solutions – Kickstart building a personalized, conversational experience for multiple industries.

Talkdesk

- Overview of Talkdesk – Cloud Contact Center Software
  - Uses Voice Biometrics to identify caller
  - Utilizes Lex for Chatbots / Can integrate other bots built by their customers if need..
  - 50% of challenge in Chatbots is after go-live, post training is always needed.

WaFd Case Study

- Migrated traditional IVR to Cloud with Transcribe / Lex / Polly
- Leveraged a lot of Lex Intents built for IVR for Chatbot
- Talkdesk allowed WaFd to bring existing solutions to Contact Center Platform.
- Roadmap is to add more sentiment analysis, support more transaction types and channels (sms, WhatsApp)

< Section Header
< Table of Contents

Use AI to improve customer experience

CHALLENGES

- Long hold and resolution times
- Single communication channel
- Lack of insights on customer pain points
- High operational expenses

Conversational AI solution

BENEFITS

- Improve customer engagement
- Enable omni-channel experience
- Uncover Insights to improve service quality
- Lower costs with automation

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon Lex

CONVERSATIONAL AI FOR VOICE AND TEXT INTERFACES

- Enables sophisticated conversations
- Easy to use
- Provides a scalable omni-channel experience

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Sophisticated conversations

INTERACTION TYPES

Frequently asked questions

- They ask about which credit cards are accepted
- A virtual agent answers their question

Transaction fulfillment

- They ask to renew their driver's license
- They renew it with a self-service virtual agent

Intelligent routing

- The agent assists them in registering a custom vehicle
- The virtual agent routes them to an appropriate agent queue
- The virtual agent verifies their identity

A constituent calls a DMV contact center

They ask to register their custom vehicle

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Popular Amazon Lex use cases

Self-service

Deflect calls with human-like virtual agents and IVRs

Intelligent routing

Identify callers' intent and route to an appropriate agent queue

Information capture

Collect key information to assist agents in resolving questions efficiently

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Business Applications

- BIZ213 – Serve your customers better with AWS Supply Chain

< Table of Contents

BIZ213

Serve your customers better with AWS Supply Chain

Speakers

- Sudarshan Seshadri, Director, Amazon
- Clifford Siegel, EVP Global Supply Chain, Lifetime Brands Inc
- Roberto Espinosa, Sr. Product Manager, Amazon Web Services

Relevant Announcements

- New Service – Supply Chain

Takeaways

- Supply Chain is based on "modern" event-driven architecture that collects the data exhaust for all processes, and uses a "Problem/Solver" method to avoid disruptions.

Azure

- This probably delves into Microsoft Dynamics territory, but it's out of my knowledge zone.

Traditional Supply Chain Challenges

- Siloed, point to point solutions prevent full visibility across all processes and makes it difficult to coordinate actions among different suppliers.

How Supply Chain Accelerates Innovation

- Easily connect data across systems
- Quickly harmonize into a unified view
- View ML-powered insights and risk alerts
- Accelerate migration with recommendations
- Scale with pay-as-you-go pricing.

Overview of Supply Chain

- Supply Chain Data Lake
  - Purpose built to aggregate data form disparate sources using out-of-the-box connectors
- ML Powered Data Association
  - Creates a Harmonized Data Model by using NLP to create associations
- Intelligence Layer for Insights
  - Connects Demand, Supply, Inventory, Shipping information together to provide actionable insights, and risks for potential disruption
- Purpose Built Capabilities
  - Everything is surfaced by persona-based interfaces that allows collaboration across stakeholders to resolve potential risks

Demo of Supply Chain Capabilities

- Supply Chain Insights
  - Aggregates data from disparate systems and consolidates to harmonized supply chain data lake.
  - Generate Insights such as Inventory Risk Alerts or Lead Time deviations
  - Allows execution to resolve potential disruptions.
  - Create "Watchlists" to surface Insights
  - Collaboration is done via a Kanban style task board
  - Resolutions are Scored based on your parameters based on locality, risk, and sustainability.
- Supply Chain Demand Planning
  - ML-powered demand forecasts
  - Demand sensing, actionable insights
  - View, override, and publish forecasts
  - Forecast explainability
  - Automatic accuracy metrics

Lifetime Brands

- Experience with Supply Chain
- How to better position supply and anticipate orders coming from customers. Perform quick scenario planning.
- Found a significant increase in statistical baseline forecast over parallel system.

< Section Header
< Table of Contents

AWS Supply Chain accelerates innovation

CMP225

What's new in Amazon EC2

Speakers

- Martin Yip, Senior Manager, Product Marketing, AWS
- Art Baudo, Principal Product Marketing Manager, AWS

Relevant Announcements

❖ New instances including those based on Graviton3

Takeaways

❖ AWS Keeps improving silicon and computing power

Azure

Overview

- 20 minutes of marketecture
  - Great Slide covering the types of migration

What's New

- New – Torn Write Protection
  - Improves database performance with EC2 I4i instances and EBS
- New – Nitro Enclaves Enhancements
  - Create isolated compute to protect and process highly sensitive data
- New – R7iz instances
- New – Graviton3

< Section Header
< Table of Contents

Amazon ECS + AWS Fargate

Look ma, no servers!

Serverless
Managed by AWS, no EC2 instances to provision, scale, or manage – simple operations model

Secure by default
Isolated, patched, and compliant for running the most sensitive workloads

Savings
Elastic on-demand pricing model with granular resource allocations giving customers the ability to procure only the vCPU and memory needed when they need it without the excess

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

NEW!

AVAILABLE NOW

AWS Nitro Enclaves Enhancements

CREATE ISOLATED COMPUTE ENVIRONMENTS TO FURTHER PROTECT AND PROCESS HIGHLY SENSITIVE DATA

GRAVITON
Nitro Enclaves is now supported across the majority of Graviton, Intel, and AMD-based Amazon EC2 instances

KUBERNETES
Use Kubernetes tools to orchestrate, scale, and deploy enclaves from a Kubernetes pod

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon EC7 R7iz instances

PREVIEW

NEW!

High-frequency memory-optimized instances powered by 4th generation Intel Xeon Scalable processor

- Up to 128 vCPU, up to 1 TiB of memory to provide up to 2.6x more vCPU and memory compared to comparable high frequency instances
- Up to 20% higher performance when compared to comparable high frequency instances
- First x86-based EC2 instance to use DDR5 memory and deliver up to 2.4x higher mem bandwidth over comparable high frequency instances
- Designed for workloads such as front-end Electronic Design Automation (EDA), relational database workloads with high per-core licensing fees, and financial, actuarial, and data analytics simulation workloads

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Graviton3

Improved Performance

Up to 25% higher compute performance and 2x higher floating-point to accelerate compute-intensive workloads

Faster Memory

Supports DDR5 memory to provide 50% more memory bandwidth over DDR4 memory

Energy Efficient

Consumes 60% less power for the same performance compared to other CPUs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

COM207

Competition of the modern workloads: Serverless vs Kubernetes on AWS

Speakers

- Niv Yungelson, DevOps Leader, Melio
- Shimon Tolts, Co-Founder & CEO, Datree

Relevant Announcements

- N/A

Takeaways

- Depends on your needs. [Editor – Go Serverless].

Azure

- N/A

Overview

- Choosing a serverless approach vs a container approach. This is a fun session for a side-by-side comparison of serverless vs Kubernetes
- Each side debated serverless vs Kubernetes on
  - Maintainability
  - Cost
  - Scalability
  - Developer Experience
  - Ecosystem
  - Monitor and Logging
  - Security

< Section Header
< Table of Contents

Maintainability – Pros and cons

Serverless

⛔ Serverless still mean servers (for someone) to manage

✅ You no longer have to provision and maintain servers to run your applications, databases, and storage systems

✅ No hardware to patch, AWS is taking care of it for you

Kubernetes

⛔ You have to keep up with a short release cycle of 4 month

⛔ Some updates require configuration files changes

✅ You have to be up to date with latest versions that are more secure

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Cost – Pros and cons

Serverless

⛔ Pay as you go – you pay for each new function and each run

✅ Pay as you go – you don't pay when the service is not running

✅ Save money in the form of personnel time

⛔ Harder to predict the cost

Kubernetes

✅ Predictable

✅ Pay-per-use

✅ Spot instance supported

⛔ Have to optimize for type/size of workload

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Scalability – Pros and cons

Serverless

⛔ Can't scale over AWS's hard limits

✅ Easy to scale horizontally and vertically

✅ No need to worry about physical servers restrictions

Kubernetes

⛔ Scaling is the admin's responsibility

✅ Automatic autoscalers available by the community and AWS

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Developer experience – Pros and cons

Serverless

⛔ Cannot be agnostic to the infrastructure

✅ Implementing actual DevOps methodology

Kubernetes

⛔ Might be complex to orchestrate a big env

✅ Easy to run locally

✅ Easy to replicate envs

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Ecosystem – Pros and cons

Serverless

- ⛔ Vendor lock-in
- ✅ More and more solutions become compatible with serverless
- ✅ Many serverless services in AWS

Kubernetes

- ✅ Part of the CNCF ecosystem
- ✅ Standardized protocols and open communication

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Pros and cons

Serverless

- ⛔ You cannot connect to a physical server
- ✅ No need to monitor and take care of servers

Kubernetes

- ✅ Supports all standardized monitoring protocols (OpenTelemetry/etc.)
- ✅ Natively integrated with Amazon CloudWatch
- ⛔ Has multiple layers and objects that need to be monitored

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Security – Pros and cons

Serverless

- ⛔ Less defined perimeter
- ✅ No system vulnerabilities to patch and worry about
- ✅ Need to consider mostly package and code vulnerabilities

Kubernetes

- ✅ Vendor neutral
- ✅ Short release cycle

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

COM301

Unleash developer productivity with infrastructure from code

Speakers

- Jeremy Daly, CEO, Ampt Web Services, Inc

Relevant Announcements

- N/A

Takeaways

- Thought provoking talk. Infrastructure from Code helps create a self-learning adaptive infrastructure. [Editor: It's a big idea that will ultimately lead to more configuration and complexity.]

Azure

- N/A

< Section Header
< Table of Contents

How building Apps Changed

- It's no longer applications running on one server, instead modern cloud native architecture is a mesh of services that must be woven together easily, and environments that need to be consistent.
- We create/configure these systems through Infrastructure as Code. There's the Declarative Approach (Terraform, Cloud Formation), need to learn a Domain Specific Language, or the Imperative Approach (Pulumi, CDX)

Benefits / Limitations of Infrastructure as Code

- Benefits
  - Deals with complex environments
  - Consistency, avoids manual human intervention
  - Reproducible environments
  - Improved Transparency and collaboration
- Limitations
  - Need both code and configuration
  - Mismatch between declarative nature of IaC and dynamic nature of systems at runtime
  - Code is coupled to your architecture

Infrastructure from Code

- Idea: Instead of writing infrastructure as code, we infer infrastructure from code based on the application logic and provision the optimal cloud infrastructure.

Favorite Quotes

- "Cloud software is no longer written, it is composed."
- Can move beyond just cloud components, but also be self-auditing, self-managing and more, based on your application code.

The evolving ecosystem IfC and Adaptive Architecture

- Self-learning so the system can modify itself, availability and failover, re-index databases.
- Why people believe this is the right approach

Key takeaways & further reading

- Cloud Solutions are Composed
- IaC tightly couples code to Infrastructure
- IfC is an alternate approach decouples business logic from underlying infrastructure
- Checkout Infrastructure from Code (IfC)

Why Infrastructure as Code?

- Configurations became complex
- Avoid drift from human intervention
- Reproducibility of environments
- Improved transparency and collaboration

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Limitations of Infrastructure as Code

- Duplication and drag as facets are expressed in both code and configuration
- Impedance mismatch between the declarative nature of IaC and the dynamic nature of systems at runtime
- Control-plane specific instructions create static architecture
- Configuration over code (bifurcation of business logic)
- Code is coupled to your architecture

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Write some application code

```
import express from "express";
import cors from "cors";
import { DynamoDBClient } from "@aws-sdk/client-dynamodb"

const app = express();
const ddbClient = new DynamoDBClient();
app.use(cors());

app.get("/user/:id", async (req, res) => {
  const params = {
    TableName: "Users", Key: { pk: { N: req.params.id } }
  };
  const user = await ddbClient.send(new GetItemCommand(params));
  res.send({ user })
})
```

Looks like you're creating an API with a GET route

And you need GetItem permissions to a DynamoDB table named "Users"

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Interpretive approach

- Resources are inferred by the application code
- Permissions are assumed based on service interactions
- Behavioral semantics are declared by event handlers
- Inter- and intra-service communications are automatically mapped
- Code is decoupled from the underlying infrastructure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

When you understand the code . . .

self-provisioning

self-instrumenting

self-documenting

self-testing

self-auditing

self-managing

self-optimizing

self-upgrading

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Adaptive architecture

- Auto scaling, automated failover, built-in resiliency
- Self-indexing databases
- Reactive telemetry/observability data
  - Memory
  - Timeouts
  - Latency
  - Service dependencies
  - Predictive scaling

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Why people believe in this approach

klotho	Decoupling code from infrastructure enables "adaptive architectures"; code is the spec and doesn't change, but the infrastructure can
shuttle	We are an orchestrator of AWS resources using the Rust API – IaC produces outputs that your code needs to wire together; Rust fills in the gap
encore	IfC enables tools that can understand the structure of your app, and reason about how it interacts with infrastructure and other services
Modal	Everything needs to run in the cloud, not on your laptop – ephemeral environments with fast feedback loops
nitric	It's about portability; we want to help developers delay making decisions until they know what resources their app needs

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Key takeaways

- We build modern cloud apps by composing multiple cloud services
- Building multi-service, native cloud applications is really hard
- Infrastructure **as** Code tightly couples your app code to static architecture
- Higher-level abstractions can still provide control while reducing redundancy
- Infrastructure **from** Code can:
  - Accelerate development
  - Decouple business logic from underlying infrastructure
  - Understand the structure of your application
  - Enable platforms to optimize over time

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

CON210

What's new and what's next with Amazon ECS

Speakers

- Akhilesh Thipparthi, Vice President, Goldman Sachs
- Nick Coult, General Manager, Amazon ECS, AWS

Relevant Announcements

❖ New – ECS Service Connect

Takeaways

❖ Amazon runs on ECS, continue to grow.

Azure

❖ Azure Container Services

The Basics

- ECS is a serverless container orchestrator. You can orchestrate containers on EC2 or Fargate.
- ECS Fargate is a serverless compute engine for containers
- ECS Anywhere allows to orchestrate containers on on-premises compute.
- ECS Faster, Better, Cheaper
- Watch – ECS powers Amazon

What's New

- New – ECS Service Connect
  - Built in Service Discovery, Visibility and traffic telemetry for service-to-service communications, higher application availability with resilient network.
- New – Larger tasks on Fargate

How are Customers using it

- Watch – Goldman Sachs
  - Discusses various architecture implementations and best practices with use cases.

What's Next

- Watch – What's Next
  - Touched upon Deployment Improvements like native support for Blue/Green deployments, Elastic File System, Service Connect.

Favorite Quotes

- C: "Are we going to get to big or ECS?"
  A: "Are you ever going to be bigger than Amazon?"

< Section Header
< Table of Contents

Amazon ECS powers Amazon

Amazon ECS is a building block for many services at Amazon

Tested for security, reliability, availability, and scale

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

ECS Service Connect simplifies inter-service communication within and across clusters

- Built-in service discovery
- Visibility with traffic telemetry for service-to-service communication
- Higher application availability with resilient network

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Larger tasks on Fargate

More CPU and Memory available.

New! Graviton2

GPU on Roadmap

AWS Fargate

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Upcoming features

Deployments
- ECS native blue/green and canary deployments

Storage
- FSx for Lustre support

Orchestration
- Task scale-in protection (launched!)
- Task def deletion

Performance
- Faster cluster autoscaling
- Ease of managing EC2 capacity and AMI upgrades

Richer Fargate
- GPU workloads
- Improved performance

Developer Experiences
- New ECS console
- AWS Copilot enhancements

Networking
- ECS-A LB support
- Service Connect encryption

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Data

- DAT218 – What's new with database migrations
- DAT219 – What's new in DocumentDB

< Table of Contents

DAT218

What's new with database migrations

Speakers

- John Winford, Sr. Manager, AWS
- ryan shevchik, Principal Solutions Architect, AWS

Relevant Announcements

- New – DMS Schema Conversion

Takeaways

- The database migration service is a great tool for data migration and data movement.

Azure

- Azure has the Database Migration Service.

Why Migrate

- Typical Cloud Reason, Faster, Better, Cheaper
  - Great Slide covering the types of migration

Migration Tools & Services

- Assess, Mobilize, Accelerate

Migration Database Service

- A Swiss Army Knife for Database Migrations
- Can also used to migrate from on-prem – cloud – on-prem
- Database stays live even when migrating
- It can also be used for data movement, not just migrations.
- DMS Fleet Advisor for analyzing migrations at scale
- Schema Conversion Tool for migrating between disparate databases or for refactoring

New Capabilities

- New – Since last year
  - DMS – Babelfish target, Db2 mainframe, SQL Server read replica, VPC endpoints, Pre-flight enhancements, Enhanced logging and Time Travel, AL2 and Gen6 instances, IPv6
  - SCT – Babelfish assessments, Snowflake schema conversion, Azure Synapse, Amazon Redshift Serverless, Google BigQuery to Amazon Redshift, SSIS to AWS Glue Studio, Informatica to Amazon Redshift redirector, Improved code conversion
- New – AWS DMS Schema Conversion
  - Allows you to do all your migrations in one place.

Demos

- Demo – DMS Schema Conversion
- Demo – DMS Automation

Migration tools and services

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Database Migration Service (AWS DMS)

SECURELY MIGRATE YOUR DATABASES AND DATA WAREHOUSES TO AWS WITH EASE & MINIMAL DOWNTIME

Managed migration

Automated migration service will discover, assess, convert, and migrate your database and analytics workloads to AWS

Just a few clicks to start the process

Breadth of options

Migrate data to and from most widely used commercial and open-source databases

Supports SQL, NoSQL, text-based, and data warehouse targets

High availability

Multi-AZ option; highly resilient and self-healing with continuous replication and monitoring for minimal downtime

Low cost

Self-service tool

Only pay for compute resources and additional log storage used

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS DMS supported sources and targets

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS DMS Fleet Advisor

AUTOMATICALLY INVENTORIES AND ASSESSES ON-PREMISES DATABASE AND ANALYTICS SERVER FLEETS

Identify databases to migrate at scale with minimal effort

Save on costs associated with migration planning and migrating workloads

Build a migration plan in hours instead of weeks

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Schema Conversion Tool (AWS SCT)

CONVERT YOUR COMMERCIAL DATABASE AND DATA WAREHOUSE SCHEMAS TO AWS

Automated inventory and migration recommendations to accelerate migrations

Converts schema and code objects to target engine

Supports a wide variety of source and target databases and data warehouses

Extracts and migrates data warehouses to Amazon Redshift

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Common customer use cases

Migrate

Migrate business-critical applications and data warehouses

Migrate from NoSQL to SQL, SQL to NoSQL, or NoSQL to NoSQL

Upgrade to a minor/major version

Consolidate and archive data

Replicate

Create cross-Region read replicas

Hydrate your data lakes/ data warehouses

Replicate to streaming platform

Modernize

Move to AWS modern managed databases like Aurora, DynamoDB, and Amazon Redshift for faster innovation

Break free from legacy databases to save, grow, and innovate

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New since last year

AWS DMS

- Babelfish target
- Db2 mainframe
- SQL Server read replica
- VPC endpoints
- Pre-flight enhancements
- Enhanced logging and Time Travel
- AL2 and Gen6 instances
- IPv6

AWS SCT

- Babelfish assessments
- Snowflake schema conversion
- Azure Synapse
- Amazon Redshift Serverless
- Google BigQuery to Amazon Redshift
- SSIS to AWS Glue Studio
- Informatica to Amazon Redshift redirector
- Improved code conversion

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS DMS schema conversion

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

DAT219

What's new in DocumentDB

Speakers

- Vin Yu, Super Product Manager, Amazon
- Rashim Gupta, Senior Manager, Product Management, Amazon Web Services

Relevant Announcements

❖ New – DocumentDB Elastic Clusters

Takeaways

❖ DocumentDB now allows for sharding..

Azure

❖ Azure has CosmosDb which has a MongoDB compatible API and supports sharding.

Overview

- DocumentDB
  - Fast and Scalable
  - Fully Managed
  - MongoDB API Compatible

What's New

- New – Regions and Instance availability
- New – Query Capabilities – Geospatial Indexes, Aggregation operators, Decimal128
- New – Enterprise Management – Dynamic volume resizing, Fast database cloning, Query auditing, Performance Insights (Demo)
  - Great Slide covering the types of migration

DocumentDB Elastic Clusters

- New – DocumentDB Elastic Clusters
  - Compatible with MongoDB APIs for sharding
  - Millions of reads and writes
  - Up to 300,000 connections
  - Easy and Fast scaling
- Pricing – No upfront costs only pay by Compute, Storage, and Backups used.

Demos

- Demo - Getting Started & Product Tour

< Section Header
< Table of Contents

Amazon DocumentDB

SCALABLE, HIGHLY DURABLE, AND FULLY MANAGED DATABASE SERVICE FOR OPERATING MONGODB API-BASED WORKLOADS

Fast and scalable

- Auto scaling storage and I/O
- Storage scales to 64 TiB
- Scale compute in minutes
- Scale out to 15 replicas for millions of reads
- Globally distributed

Fully managed

- Built-in high availability
- Backups enabled by default
- Durable by default
- Security best practices by default
- Automatic patching
- Monitoring and alerting

MongoDB API compatible

- Applications, drivers, and tools can be used with little or no change
- Supports hundreds of APIs, operators, and stages
- Continually working backward from customers to deliver the capabilities they need

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New Regions and instance availability

Graviton2 instances (t4g, r6g) availability

Asia Pacific (Seoul)

South America (São Paulo)

Europe (Paris)

Region launches

Milan, Italy

Beijing, China

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Query capabilities

Geospatial indexes

$nearSphere, $geoNear, $minDistance, $maxDistance, $geoWithin, $geoIntersects

Aggregation operators

$mergeObjects and $reduce

Decimal128

Provides 128 bits of decimal representation supporting 34 decimal digits of precision

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Enterprise management features

Dynamic volume resizing

Storage space automatically increases up to a maximum size of 64 tebibytes (TiB) when you need more storage and decreases automatically when you delete data.

Fast database cloning

Create clones to enable fast creation of a new cluster that has the same data as the original. Database cloning is faster than restoring a snapshot and requires no additional space at the time of creation.

Query auditing (now with DML)

DocumentDB will record Data Manipulation Language (DML) events to Amazon CloudWatch Logs for monitoring and analysis. This includes events corresponding to insert(), update(), delete(), find(), aggregates, and more.

Performance Insights (preview)

Performance tuning and monitoring feature that helps you quickly assess the load on your database and determine when and where to take action.

With one click, you can add a fully managed performance monitoring solution to your Amazon DocumentDB instances.

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon DocumentDB Elastic Clusters

NEW!

New type of cluster (Elastic Cluster) for Amazon DocumentDB that supports workloads with millions of reads/writes per second and petabytes of storage capacity

Elastic Clusters also simplify how developers interact with Amazon DocumentDB; no need to choose, manage, or upgrade instances!

Compatible with MongoDB APIs for sharding

Millions of reads and writes

Up to 300,000 connections

Easy and fast scaling

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

How is it priced?

No upfront costs and only pay for what you use with easy-to-understand predictable pricing

Compute – vCPUs per hour

Storage – GB per month

Backups – GB per month

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

DevOps

- DOP201 – AWS infrastructure as code: A year in review
- DOP202 – Building on AWS with AWS tools, services, and SDKs
- DOP205 – Build & run it: Streamline DevOps capabilities with machine learning
- DOP206 – Introducing CodeCatalyst

< Table of Contents

DOP201

AWS infrastructure as code: A year in review

Speakers

- Ben Perak, Principal Product Manager, Amazon Web Services
- Tatiana Cooke, Principal Product Manager, AWS

Relevant Announcements

- New – Proactive Controls for Config and Control Tower

Takeaways

- AWS is continuing to standardized on the resource registry foundation, allowing different levels of authoring (CloudFormation, CDK, SAM)

Azure

- Azure has the Azure Resource Manager, newer Bicep Language, and Azure CLI

< Section Header
< Table of Contents

AWS Infrastructure as Code Portfolio

- How customers use IaC
- IaC Portfolio at a Glance
- Launched Cloud Control API last year to offer a common set of CRUDL APIs for all supported resources
- New coverage updates allowing CloudFormation to support resources for Organizations and over 50 partner solutions

IaC Trends

- Platform engineering is emerging to drive value
- Teams are taking a GitOps approach which includes IaC as part of the application development outer loop.
- Bringing DevOps practices to Infrastructure
- Empowering Developers to influence Infrastructure

Evolving Organizations and Personas

- Allows for different levels of authoring (CloudFormation, CDK, SAM)
- Enhancements in CloudFormation add additional support for transforms
- Ability to see CDK Construct Tree in CloudFormation console
- Best Practices enabled by DevOps

Shift Left with Policy as Code

- Consistent policy definition enforced across lifecyle
- CloudFormation (CFN) Guard is a tool to scan templates for possible policy violations
- New – Proactive Controls (CloudFormation Hooks + CFN Guard)
  - Proactively identifies noncompliant resources before they are provisioned.

IaC Year Ahead

- Increase registry resource coverage expose via Cloud Control API
- Improve Performance
- CDK Enterprise Adoption
- Deployment visibility

How customers use AWS infrastructure as code

AWS IaC

Different authoring languages to meet customer choice to describe infrastructure

Automates provisions infrastructure as described in the template

Makes it easy to scale infrastructure

Tooling and integrations for enterprise requirements around compliance, governance, automation, and security

Manage AWS and third-party resources together

Over a million active customers manage application resources with AWS CloudFormation every week

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS IaC portfolio at a glance

Platform operations and deployment

AWS Proton | AWS Amplify | AWS Service Catalog

HashiCorp Terraform

Pulumi

Red Hat Ansible Automation Platform

AWS CDK & AWS SAM

AWS CloudFormation

AWS Cloud Control API

AWS CloudFormation resource registry

Amazon EC2 | AWS Transit Gateway | Amazon S3 | Amazon Kinesis | Amazon Kendra | Hundreds of AWS and third-party resources

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Cloud Control API

Registry resource model: standard specification for developing a resource; each resource is defined by a schema and create/read/update/delete/list (CRUDL) handlers

CCAPI takes advantage of a standard resource specification to offer a common set of CRUDL APIs for all supported resources

AWS Cloud Control API

AWS CloudFormation resource registry

Amazon EC2 | AWS Transit Gateway | Amazon S3 | Amazon Kinesis | Amazon Kendra | Hundreds of AWS and third-party resources

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

New coverage updates

NEW! AWS CloudFormation now supports resources for AWS Organizations

The CloudFormation registry exposes a standard specification that is open to non-AWS solutions

NEW! AWS CloudFormation now supports 50 new resources across popular AWS Partner solutions

aqua | new relic | Opsgenie | okta | Spot by NetApp | BigID | DATADOG | snyk | FIREEYE | mongoDB | PagerDuty | Sysdig | GitLab | paloalto NETWORKS | snowflake | fastly | CLOUDFLARE | LACEWORK | GitHub

Platform engineering is emerging to drive value

Customers are adopting platform engineering functions to expose best practices and ease consumption

Developers own application definition, and increasingly influence infrastructure definitions

Serverless architectures often involve infra and application deployments in one

Customers are looking for solutions that align to their workforce and architectures

Targeted solutions, built on top of AWS CloudFormation, have been introduced to meet the needs of different personas

Platform operations and deployment

AWS Amplify | AWS Service Catalog | AWS Proton

AWS CDK & AWS SAM

What is GitOps?

GitOps is an approach where infrastructure is defined as code (IaC) alongside application code, versioned in a git repository, and then provisioned following the same merge request process as application software code

Infrastructure as code
hosted just like software code

+

Git
versioning and pull requests workflows

+

CI/CD
for automated build, test, and deploy

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Bringing DevOps practices to infrastructure

Teams with higher-evolved DevOps practices:

Change management effectiveness
3x more effective

Restore service after incident in less than a day
77% of teams

Remediate vulnerability in less than a day
60% of teams

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Empowering app developers to influence infra

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Right set of tools for your organization

AWS CDK AND AWS SAM COMPILE TO AWS CLOUDFORMATION

Model infrastructure

Provision and delete infrastructure

Manages state, dependencies

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

IaC launches serve all personas

CloudFormation Open Language Discussion Transform

AWS CDK Construct Tree View in CloudFormation Console

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Internal developer platforms enable DevOps best practices

Move from manual review to self-service

Integrate automation and "golden path" best practices

Centralize preferred templates for consistency, visibility, cost control

Infrastructure is defined, built, and run through CI/CD by default

Delight developers with the right abstractions

- Policies
- Governance
- Security
- Cost

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Consistent policy definition enforced across lifecycle

Define | Build | Deploy | Operate

Remediation

CFN Guard
Template validation

CloudFormation Hooks
Enforce policy prior to provisioning

AWS Security Hub, AWS Config
Check for policy post-provisioning

Scan templates using guard to check for possible policy violations

Enforce compliance at the Cloud Control API layer

Use to detect post-provisioning policy violations

Guard Rules

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Opinionated purpose-built controls for 28 AWS services (preview)

COMPREHENSIVE CONTROLS MANAGEMENT WITH AWS CONTROL TOWER

- **NEW! Proactive controls (CloudFormation Hooks + CFN Guard)**
  - Proactively identifies noncompliant resources before they are provisioned by AWS CloudFormation
  - Policies are automatically enforced on all AWS CloudFormation deployments

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS IaC year ahead

- Coverage, coverage, coverage – support Day 1 service launch, migrate resources to registry resource model; expose resource layer via AWS Cloud Control API
- Performance – more and more internal and external solutions rely on AWS IaC for provisioning; we are focusing on the provisioning speed for abstractions
- CDK enterprise adoption – deliver new innovation to help enterprises adopt CDK
- Deployment visibility – ensure customers have visibility into changes and can quickly recover from unintended changes

"Your future is whatever you make it, so make it a good one."

DOP202

Building on AWS with AWS tools, services, and SDKs review

Speakers

- Kyle Thomson, Senior Software Development Engineer, Amazon Web Services

Relevant Announcements

- New – CodeWhisperer announced in June.

Takeaways

- A good overview of Extensions, SDKs, and CLIs for Development

Azure

- Azure also has many extensions, SDKs and CLIs for building and developing services

Developer Tools

- Overview of developer tools available

Automated Provisioning

- Use Service Catalog to centrally manage commonly deployed services and provisioned software
- Reference architecture for creating a Lambda Account Vending function to create necessary roles, permissions, and more from the Service Catalog.

IDE Extensions

- IDE Toolkits
  - AWS Cloud9 – https://aws.amazon.com/cloud9
  - Visual Studio Code – https://aws.amazon.com/visualstudiocode/
  - JetBrains (e.g., IntelliJ, PyCharm) – https://aws.amazon.com/intellij/
  - Visual Studio – https://aws.amazon.com/visualstudio/
- Demo – IDE Toolkit with JetBrains
- New – CodeWhisperer – https://aws.amazon.com/codewhisperer/

SDKs

- SDKs for Languages, Frontend Web & Mobile, Communication & Collaboration, and IoT.

CLIs

- AWS CLI – https://aws.amazon.com/cli
- AWS ECS Copilot CLI
- AWS SAM CLI

Why use AWS Service Catalog?

AWS Service Catalog allows you to centrally manage commonly deployed AWS services and provisioned software products

- Centrally manage IT service lifecycle
- Control AWS provisioning (cost, security, governance)
- Self-service portal – one-stop shop
- Standardized deployments
- Version control for AWS users
- Enforce governance and compliance proactively
- Integrate with ITSM tools

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

How to provision…

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon CodeWhisperer

- Machine-learning powered coding companion
- Integrated into AWS Cloud9, VS Code, and JetBrains IDEs
- Supported languages
  - Python
  - Java
  - JavaScript
  - more on the way…
- https://aws.amazon.com/codewhisperer/
- Currently in preview

AWS supported SDKs

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Command Line Interface

- Unified tool
- Multi-platform
  - Linux, macOS, Windows, Docker, AWS CloudShell, Amazon Linux (AL2)
- Access APIs of AWS services
- Equivalent functionality to AWS Management Console
- Open source
- Manage your resources
- https://aws.amazon.com/cli/

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon ECS: AWS Copilot CLI

- Simplifies modeling, creating, and managing Amazon ECS applications
- Without AWS Copilot, you have to
  - Create an ECS task definition
  - Create an ECR image registry
  - Build/push images
  - Create and manage ECS services
- Now – all you need is a Dockerfile
- Open source
- https://go.aws/3Gvj7xQ
- https://aws.github.io/copilot-cli

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM CLI

- AWS Serverless Application Model (SAM)
  - Shorthand syntax to express functions, APIs, databases, and event source mappings
  - Modeled with CloudFormation compatible YAML
  - Open source
- CLI features
  - Build Lambda functions locally
  - Step-through debug Lambda functions (via the AWS IDE toolkits)
  - Deploy projects via CloudFormation
  - Sync/watch workflows
- https://aws.amazon.com/serverless/sam/

Favorite Quotes

- “We stopped hiring IT Ops firefighters along time ago. Inevitably, some will eventually become arsonists.”

Introducing Amazon CodeWhisperer

BUILD APPLICATIONS FASTER WITH ML-POWERED CODING COMPANION

- Machine learning (ML)–powered developer tool
- Provides code recommendations based on comments in natural language and prior code

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

CodeWhisperer: ML-powered coding companion

Provides code recommendations in natural language based on contextual information such as prior code and comments

Generates

- Entirely new code based on context
- Code from plain English comments
- Complete functions

Available in all major integrated development environments (IDEs) as an extension

```
# Write a function to upload a file to S3.
def upload_file_to_s3(file_name, bucket_name, object_name):
    """
    Uploads a file to an S3 bucket

    :param file_name: File to upload
    :param bucket_name: Bucket to upload to
    :param object_name: S3 object name. If none then file_name is used
    :return: True if file was uploaded, else False
    """

    # Upload the file
    s3_client = boto3.client('s3',
                             aws_access_key_id=AWS_ACCESS_KEY_ID,
                             aws_secret_access_key=AWS_SECRET_ACCESS_KEY,
                             region_name=AWS_REGION_NAME)

    try:
        s3_client.upload_file(file_name, bucket_name, object_name)
        print(f'File {file_name} uploaded to S3 bucket {bucket_name} as {object_name}')
        return True
    except FileNotFoundError:
        print(f'File {file_name} not found')
```

Amazon CodeGuru

AUTOMATE CODE REVIEWS WITH ML-POWERED RECOMMENDATIONS

- ML-powered static code analysis tool
- Improves code quality by scanning for critical issues and hard-to-find bugs
- Provides recommendations

DevOps Guru recommendations

Recommendations (3) Info

View updates we recommend you implement to address the anomalies in this insight.

Configure desync mitigation mode for AWS Application Elastic Load Balancer (ELB)

The requests made to your load balancer do not comply with RFC 7230. To learn more on how to make your load balancer compliant with RFC 7230, see Configure desync mitigation mode for AWS Application Elastic Load Balancer (ELB).

Why is DevOps Guru recommending this?

The DesyncMitigationMode_NonCompliant_Request_Count metric in ApplicationELB breached a high threshold.

Related metric (1)

DesyncMitigationMode_NonCompliant_Request_Count

ApplicationELB app/GMovies-OTT-LB-PROD-INT/df570d5baaf54882

Troubleshoot errors in AWS Application Elastic Load Balancer (ELB)

Your load balancer is throwing errors. To learn more and troubleshoot load balancer errors, see Troubleshoot errors in AWS Application Elastic Load Balancer (ELB).

Why is DevOps Guru recommending this?

The HTTPCode_Target_5XX_Count metric in ApplicationELB breached a high threshold.

Related metric (1)

HTTPCode_Target_5XX_Count

ApplicationELB app/wifi-rearch-alb-st/97b4aed35b50dfc0

Troubleshoot latency issues in AWS Application Elastic Load Balancer (ELB)

There is an increase in response time from your load balancer. To learn more or troubleshoot the latency issues, see Troubleshoot latency issues in AWS Application Elastic Load Balancer (ELB).

Why is DevOps Guru recommending this?

DOP206

Introducing Amazon CodeCatalyst

Speakers

- Harry Mower, Director, AWS CodeSuite, Amazon
- Doug Clauson, Product Manager - CodeSuite, Amazon Web Services

Relevant Announcements

- New – CodeCatalyst

Takeaways

- CodeCatalyst is a suite of integrated tools that help you accelerate and automate setting up a project. I tried it out, so far I see no reason to switch from GitHub

Azure

- Microsoft has Github and Azure DevOps, along with Quickstart templates

Introduction

- AWS offers a wide variety of devtools, but still challenges in
  - Setting up projects and integrating tools
  - Automating CI/CD and environments
  - Complexity in Modern Applications

CodeCatalyst

- A suite of tools that allows your team to go from idea to production
  - Demo – Accelerate project setup with Blueprints
  - Demo – Automate Daily Workflows
  - Demo – Automate Environments
  - Demo – Fluid Collaboration

< Section Header
< Table of Contents

AWS dev tools – A full set of tools

Front End Web and Mobile Development

- FWM308 – What's new for frontend and web and mobile developers with AWS Amplify
- FWM309 – Design to code: Build an app frontend UI in minutes with AWS Amplify Studio
- FWM315 – Create real-time, event-driven apps with Amazon EventBridge & AWS AppSync

< Table of Contents

FWM308

What's new for frontend web and mobile developers with AWS Amplify

Speakers

- Mohit Srivastava, Senior Manager Product Management, Amazon
- Abdallah Shaban, Senior Product Manager, Amazon

Relevant Announcements

- Improvements to both Back-End and Front-End components. See New links on Left

Takeaways

- Amplify is a set of tools and framework that allows you to build web & mobile apps from same codebase, as well as easily create skeleton code. It also provide a forms like model to easily create general purpose applications

Azure

- PowerApps may be the closest low code comparison, with dotnet Maui being more code-centric

The State of Web and Mobile Development

- Front end developers have a lot of responsibility

What is AWS Amplify

- A set of tools that can be used together or independently
  - Build AWS Backend
  - Build App UI
  - Host an App (web)
  - Connect to Backend

Building fullstack web and cross-platform app

- Demo – Building out the back-end
  - New – GraphQL in Studio, Real-time data, In-app messages
- Demo – Building out the front-end
  - New – Create cloud connected forms for any API with Studio Form Builder
  - New – Hosting now supports server side rendered apps with Next.js 13
- Demo – Building a Flutter application (mobile)
  - New – Enhancements for Mobile applications

Underlying Architecture

- Brief discussion of underlying architecture

< Section Header
< Table of Contents

Frontend developers have broad responsibility

Agility
Time to market
Rapid innovation
No one-way doors

Great experience
Multidevice
Modern look/feel
Differentiated features

Production-ready
Low latency
Secure
Reliable and scalable

Technical needs

Fullstack development
Features that use device + cloud
Integrated development
Less boilerplate
Best practices built in

Web
Native-like experience
Support for hybrid client/server rendering (e.g., Next.js)

Cross-platform
One codebase
Support for Flutter, React Native, Apple cross-platform

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Amplify

USE THE PIECES TOGETHER OR ON THEIR OWN

FULLSTACK DEVELOPMENT | WEB | CROSS-PLATFORM & WEB

Build AWS backend
Amplify Studio
Amplify CLI

Build app UI (web)
Amplify Studio

Host an app (web)
Amplify Hosting

Connect to backend
Amplify Libraries
UI Components

Build an AWS backend: What's new

NEW

- GraphQL in Studio: Query auto-generated GraphQL APIs
- Real-time data: Service-side filtering to 1/ send updates only to specific users or groups (collaboration apps) and 2/ selectively sync data (optimize network traffic and local storage)
- In-app messages: Send targeted messages to defined user segments or trigger contextual messages based on user behavior

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amplify Studio Form Builder

CREATE CLOUD CONNECTED FORMS FOR ANY API WITH NEW REACT FORM BUILDER

NEW

Forms for any API
Generate forms from an API definition or create new forms from scratch

Design visually
Save time by visually configuring common validation rules

Extend via code
Customize validation rules and form styling in code

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Fully managed hosting for server side rendered apps built with Next.js 13

NEXT.JS BENEFITS AND DEVELOPER EXPERIENCE MEET THE POWER OF AWS

NEW

Next.js benefits

Hybrid static & server rendering to support both interactivity and faster initial load times

Zero config deployment

Just connect your repo. Single developer experience across browser and server code

Integrate with backends

Works seamlessly with Amplify backends, such as Auth and Data

Amazon CloudWatch integration

Observe, monitor, and troubleshoot SSR apps

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Connect to an AWS backend: What's new

NEW

Flutter: Rewritten using Dart to create mobile and now desktop and web apps from a single Dart-based codebase

iOS: Rewritten using Swift to create iOS and now macOS apps from a single codebase. Now supports idiomatic Swift features like async/await for implementing structured concurrency.

Android: Rewritten using Kotlin with Storage and Auth improvements

Authenticator UI component: Now available for Flutter and React Native

FWM309

Design to code: Build an app frontend UI in minutes with AWS Amplify Studio

Speakers

- Christopher Woolum, L6 FEE, Amazon AWS
- Rene Brandel, Principal Product Manager - Technical, Amazon Web Services, Inc.

Relevant Announcements

❖ New – Amplify Studio Form Builder

Takeaways

❖ Easily get from design to code, build interactive forms with form builder, deploy and scale with Amplify hosting.

Azure

❖ PowerApps may be the closest low code comparison, with dotnet Maui being more code-centric

Amplify Studio

- Input Figma designs output React Code. See a Demo.
- Evolution of building an app
  - Build AWS Backend
  - Build App UI
  - Host an App (web)
  - Connect to Backend
- Watch – Building a Full Stack App
  - Build, Ship, and Scale with Amplify
  - New – Amplify Studio Form Builder for connected forms
  - Deploy with Amplify Hosting

Introducing AWS Amplify Studio

Amplify Studio

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amplify – Quick tour

Build

Configure UI components and AWS backends fast

Seamlessly connect frontends

Ship

Deploy your app frontend and backend

Scale

Use CDK to override, add, and export infrastructure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amplify Studio form builder

BUILD, DESIGN, AND RENDER CLOUD CONNECTED FORMS FOR ANY API WITH NEW REACT FORM BUILDER

NEW

Forms for any API

Generate forms from an API definition or create new forms from scratch

Design visually

Save time by visually configuring common validation rules

Extend via code

Customize validation rules and form styling in code

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Ship faster with Amplify Hosting

- Fully managed hosting service for modern web apps
- Full-stack continuous deployments
- Easy custom domain setup
- PR previews

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

FWM315

Create real-time, event-driven apps with Amazon EventBridge & AWS AppSync

Speakers

- Venugopalan Vasudevan, Sr. Specialist SA - FE & Mobile, AWS

Relevant Announcements

- N/A

Takeaways

- If you want to build a real-time event driven app with subscriptions and GraphQL capabilities, this session will get you started

Azure

- Azure has multiple Messaging Products and a GraphQL data store that is compatible with Gremlin

GraphQL Overview

- A query language for your API, and a runtime for servicing the queries on your existing data. (Queries, Mutations, Subscription).
  - Build AWS Backend

AppSync Overview

- A serverless fully managed solution for running graphQL workloads
- Can connect to multiple back-end data sources and APIs
- Customers are using AppSync for APIs, Real-Time Applications, and offline applications.

Type of Applications

- Real-Time Scenarios
- Subscriptions
- Capabilities
  - Filtering and Invalidation
  - Event Driven Apps with Event Bridge

Demo

- Demo building a Real-Time application using Event Bridge and AppSync

< Section Header
< Table of Contents

GraphQL is a **query language** for APIs and a **runtime** for fulfilling those queries with your **existing data**

Describe your data

```
type Project {
  name: String
  tagline: String
  contributors: [User]
}
```

Ask for what you want

```
{
  project(name: "GraphQL") {
    tagline
  }
}
```

Get predictable results

```
{
  "project": {
    "tagline": "A query language for APIs"
  }
}
```

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

GraphQL, the GraphQL logo and any related marks are trademarks of Facebook, Inc.

A query language for APIs

Queries

```
query GetPost {
  getPost(id: "1") {
    id
    title
    author
    date
  }
}
```

Mutations

```
mutation CreatePost {
  createPost(input: {…}) {
    id
    title
    author
    date
  }
}
```

Subscriptions

```
subscription OnCreatePost {
  onCreatePost {
    id
    title
    author
    date
  }
}
```

AWS AppSync overview

ACCELERATE APPLICATION DEVELOPMENT AND IMPROVE PERFORMANCE WITH GRAPHQL AND PUB/SUB API SERVICE

Build applications faster

Frontend developers can build features without waiting for backend teams to create new APIs

Simplified data access

Interact with data from multiple microservices, data sources, and REST APIs using a single API

Improve application performance

Fetch only required data and reduce the number of network requests to fetch data for a particular view

Real-time experiences

Create engaging applications with real-time subscriptions

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Simplified data access

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

What are customers building with AppSync?

Universal APIs
- Enterprise data
- Apps connect to many data sources and microservices

Real-time applications
- Chat functionality
- Fan engagement
- Location-aware notifications

Offline applications
- Consumer
- IoT/connected
- Field service
- Offline support

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time apps

- Sending data (Publishing) – User, event, backend
- Receiving data (Subscribing)
- As it happens
- Push, not polling
- Milliseconds, not seconds
- 1:1, 1:many, and many:many

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time use cases

- Collaboration
- Dashboards
- Leaderboards
- Media and entertainment
- Healthcare
- Live streaming
- Sports
- Geolocation
- Chat and messaging
- Gaming
- Audience interaction
- Social media
- E-learning
- Automation
- Internet of Things (IoT)
- Smart homes
- Trading and fintech
- Ecommerce

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time GraphQL subscriptions

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Real-time GraphQL subscriptions

Connection management | Scalability | Fan-out | Broadcasting | Metrics

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Subscriptions filtering in AWS AppSync

- Basic filtering
  - Up to 5 arguments, defined on the client
  - AND logic only
  - No operators
  - Strict equality
- Enhanced filtering
  - Multiple logical operators (and, or, contains, le, gt, in, between)
  - Defined centrally on the API backend or dynamically from the client
  - JSON format
  - Invalidation capabilities

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon EventBridge

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Use cases

- Send specific events to one client (1:1)
  - Order fulfillment
  - Incident response
  - Location tracking
- Send events to multiple clients (fan out)
  - IoT devices
  - Partner events

Serverless

- SVS204 – What's new with serverless
- SVS303 – Building real-world serverless applications with AWS SAM
- SVS308 – (Workshop) AWS serverless developer experience: A day in the life of a developer

< Table of Contents

SVS204

What's new with serverless

Speakers

- David Boyne, Senior Developer Advocate, AWS

Relevant Announcements

- Lambda Snap Start, Step Function Distributed Map, EventBridge Pipes

Takeaways

- Three major updates to core serverless components, as well as incremental

Azure

- Azure has Functions, Logic Apps, and Enterprise Messaging

Lambda

- Function URLs – A dedicated HTTPS endpoint for your lambda function. Guidance on when to use.
- New – SnapStart, reduce Cold Start time, currently for Java 11 Runtime
- Telemetry API – Get more information out of our Lambda (platform traces, performance)
- More space in Lambda Storage
- Lambda Power Tools to help discover and incorporate serverless best practices

Step Functions

- Workflow Studio to Visual Step Functions
- Added Intrinsic Functions to help reduce code
- New – Distributed Map
- Added updated console experience

EventBridge

- Inbound WebHooks
- Salesforce Integration with EventBridge (Bi-directional integration with Salesforce)
- New – Pipes
- Create schedules with Scheduler

Serverless Application Model

- Accelerate development with sam build, sam sync, and sam logs
- Connectors –allow developers to define how events flow between two resources as well as permissions.

< Section Header
< Table of Contents

AWS Lambda function URLs

A NEW WAY TO INVOKE AWS LAMBDA FUNCTIONS WITH AN HTTP REQUEST

- A dedicated HTTPS endpoint for your Lambda function
- A separate resource in AWS CloudFormation
- Generates a unique URL to invoke an AWS Lambda Function
- Can point to $LATEST or user-defined alias

https://<url-id>.lambda-url.<region>.on.aws/

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

When to use Lambda URLS?

	Lambda URLS	API Gateway
Auth Type	IAM	API Key, IAM, Amazon Cognito, Lambda (Custom)
HTTPS	Yes	Yes
Max Timeout	15 minutes	29 seconds
Validation	No (In Code)	Yes
SDK generation	No	Yes
Cost	Free	From $3.50/million for first 333 million
AWS WAF	No	Yes

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Lambda SnapStart

OPTIMIZES AWAY THE INITIALIZATION OVERHEAD OF CREATING AN EXECUTION ENVIRONMENT

- New Lambda feature that optimizes away the initialization overhead of creating an execution environment
- Allowing functions to start running handler function code within hundreds of milliseconds
- Initially available for AWS Lambda functions running Amazon Corretto Java 8 (java8.al2) or Amazon Corretto Java 11 (java11)
- Powered by MicroVM Snapshot technology

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Telemetry API (2022)

Receive telemetry data including logs, platform traces, and new performance metrics with new Lambda API

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

10 GB /tmp space – 2022

MORE TEMPORARY SPACE IN YOUR AWS LAMBDA EXECUTION ENVIRONMENT

Features	Description
Maximum size	10,240 MB
Persistence	Ephemeral
Content	Dynamic
Storage type	File system
Operations supported	Any file system operation
Pricing model	Included in Lambda (Charged over 512 MB)
Shared across all invocations	No

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Lambda Powertools

A SUITE OF UTILITIES FOR AWS LAMBDA FUNCTIONS

- Open source library to help discover and incorporate serverless best practices
- Logger, Tracing, Metrics, and Utilities for Lambda
- Python 2.5B invocations in 2021, growing YOY to 6.5B in 2022
- In 2022 released support for .NET (preview) and TypeScript (GA)

2.5B

↓

6.5B

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Step Functions Workflow Studio

OVER 223 SERVICES AND 10,000+ APIS

The **workflows** you build with Step Functions are called **state machines**, and **each step** of your workflow is called a **state**

When you execute your state machine, **each move** from one state to the next is called a **state transition**

You can **reuse components**, easily edit the sequence of steps or swap out the code called by task states as your needs change

AWS Step Functions Workflow Studio

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS Step Functions intrinsic functions

Arrays

JSON data manipulation

Encoding and decoding

Math operations

String operations

Unique identifier generation

aws © 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Step Functions: New console experience

DEBUGGING STEP FUNCTIONS WITH THE NEW EXECUTION PAGE

- New experience to help you analyze, debug, and optimize Step Functions Standard Workflows
- Events tab that displays all the events for the selected state, with their corresponding timestamp
- Input & Output tab allows you to debug state input to output with transformations in between with Parameters
- Turn on "New execution page" to get started

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Step Functions distributed map state

- Coordinate large-scale parallel workloads in Step Functions
- Iterate over millions of S3 objects such as JSON or CSV files
- Up to 10,000 parallel executions
- Invoke Lambda or Amazon ECS/AWS Fargate for large scale on demand serverless compute
- Choose express or standard workflow

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

EventBridge inbound webhooks

- Save time integrating with GitHub, Stripe, and Twilio
- Forward events from GitHub, Twilio, and Stripe into EventBridge
- Provisions CloudFormation stack with Lambda function URL

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Salesforce integration with EventBridge

- Integrate Salesforce with AWS without any code
- Designed for event driven architecture and real-time applications

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

EventBridge Pipes

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon EventBridge Scheduler: Use case

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM accelerate

sam build

- Parallel builds
- Incremental builds
- Temporary layers

sam sync

- Update code without redeploying
- Watch for changed files

sam logs

- Get aggregated logs in your local terminal
- Filter logs
- Include traces

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Serverless connectors

Connectors allow the developer to describe how data and events flow between two resources and the level of permissions required

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

SVS303

Building real-world serverless applications with AWS SAM

Speakers

- Eric Johnson, Principal Developer Advocate, AWS

Relevant Announcements

- Minor announcements, all of these are covered in SVS204

Takeaways

- A great overview of using the Serverless Application Model method for developing serverless apps

Azure

- N/A

Intro to Serverless Application Model (SAM)

- SAM is made up of two parts
  - Transform Templates – Infrastructure as Code
    8 Serverless Resource Types
  - SAM CLI – Tooling for development
    App Development & Stack Management

SAM Local

- Watch and Overview SAM Local commands
  - start-api, invoke, generate-event, start-lambda

SAM Accelerate

- Build, Sync, and Logs to improve development and debugging
  - Filtering and Invalidation
  - Event Driven Apps with Event Bridge

Code Deployment

- Sam depoy, sam pipeline
  - Event Driven Apps with Event Bridge

Best Practices

- Watch Best Practices

< Section Header
< Table of Contents

AWS SAM has two parts

Transform templates

Shorthand syntax expresses resources and event source mappings; it provides infrastructure as code (IaC) for serverless applications

AWS Command Line Interface (AWS CLI)

Provides tooling for local development with rapid iteration, debugging, build, packaging, and deployment for serverless applications

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM serverless resources

8 serverless resource types

- AWS::Serverless::Function
- AWS::Serverless::Api
- AWS::Serverless::HttpApi
- AWS::Serverless::SimpleTable
- AWS::Serverless::LayerVersion
- AWS::Serverless::Application
- AWS::Serverless::StateMachine
- AWS::Serverless::Connector

SAM Version 2016-10-31

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM CLI

App development
- init
- build
- local
- logs
- traces
- sync

Stack management
- validate
- package
- delete
- deploy
- pipeline
- publish*

```
(p3_9_9) ➜  ~ sam --help
Usage: sam [OPTIONS] COMMAND [ARGS]...

  AWS Serverless Application Model (SAM) CLI

  The AWS Serverless Application Model extends AWS CloudFormation to provide
  a simplified way of defining the Amazon API Gateway APIs, AWS Lambda
  functions, and Amazon DynamoDB tables needed by your serverless
  application. You can find more in-depth guide about the SAM specification
  here: https://github.com/awslabs/serverless-application-model.

Options:
  --debug     Turn on debug logging to print debug message generated by SAM
              CLI and display timestamps.

  --version   Show the version and exit.
  --info
  -h, --help  Show this message and exit.

Commands:
  init      Init an AWS SAM application.
  validate  Validate an AWS SAM template.
  build     Build your Lambda function code
  local     Run your Serverless application locally for quick development &...
  package   Package an AWS SAM application.
  deploy    Deploy an AWS SAM application.
  delete    Delete an AWS SAM application and the artifacts created by sam
            deploy.

  logs      Fetch logs for a function
  publish   Publish a packaged AWS SAM template to the AWS Serverless
            Application Repository.

  traces    Fetch AWS X-Ray traces
  sync      Sync a project to AWS
  pipeline  Manage the continuous delivery of the application
(p3_9_9) ➜  ~
```

AWS SAM Accelerate

sam build

- Parallel builds
- Incremental builds
- Temporary layers

sam sync

- Update code without redeploying
- Watch for changed files

sam logs

- Get aggregated logs in your local terminal
- Filter logs
- Include traces

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM deploy

Deploys or updates the current stack using AWS CloudFormation

CLI flags
--guided -g
--config-env
--on-failure

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

AWS SAM pipeline

- Generates the resource and configuration required to build a continuous integration and continuous delivery (CI/CD) pipeline
- Supports
  - AWS CodeSuite
  - GitHub Actions
  - Jenkins CI
  - GitLab

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

The development cycle

Create	Local testing	Remote testing	Staging	Production
sam init	sam build	sam sync	sam pipeline	sam pipeline
	sam local	sam logs	sam logs	sam logs
	invoke	sam traces	sam traces	sam traces
	start-api	sam delete		
	start-lambda			
	generate-event			
	sam delete			
		AWS Cloud Dev account	AWS Cloud Staging account	AWS Cloud Production account

© 2022, Amazon Web Services, Inc. or its affiliates. All rights reserved.

SVS308

AWS serverless developer experience: A day in the life of a developer

Speakers

- Stephen Liedig , Principal Serverless Specialist Solutions Architect, Amazon Web Services
- Tomas Mihalyi, Serverless Specialist - Ent Support, AWS

Relevant Announcements

- N/A

Takeaways

- A workshop for learning how to build using the Serverless Application Model

Azure

- N/A

Workshop
